

Setting up Regional MOM6

Kate Hedstrom
UAF

New Domains

- **Need to make an orthogonal grid in some coordinate system**
 - Rectangular
 - Curvilinear
- **One way is to build in flat space using conformal map projections**
 - Mercator
 - Lambert conformal conic
 - Polar stereographic

Some Options

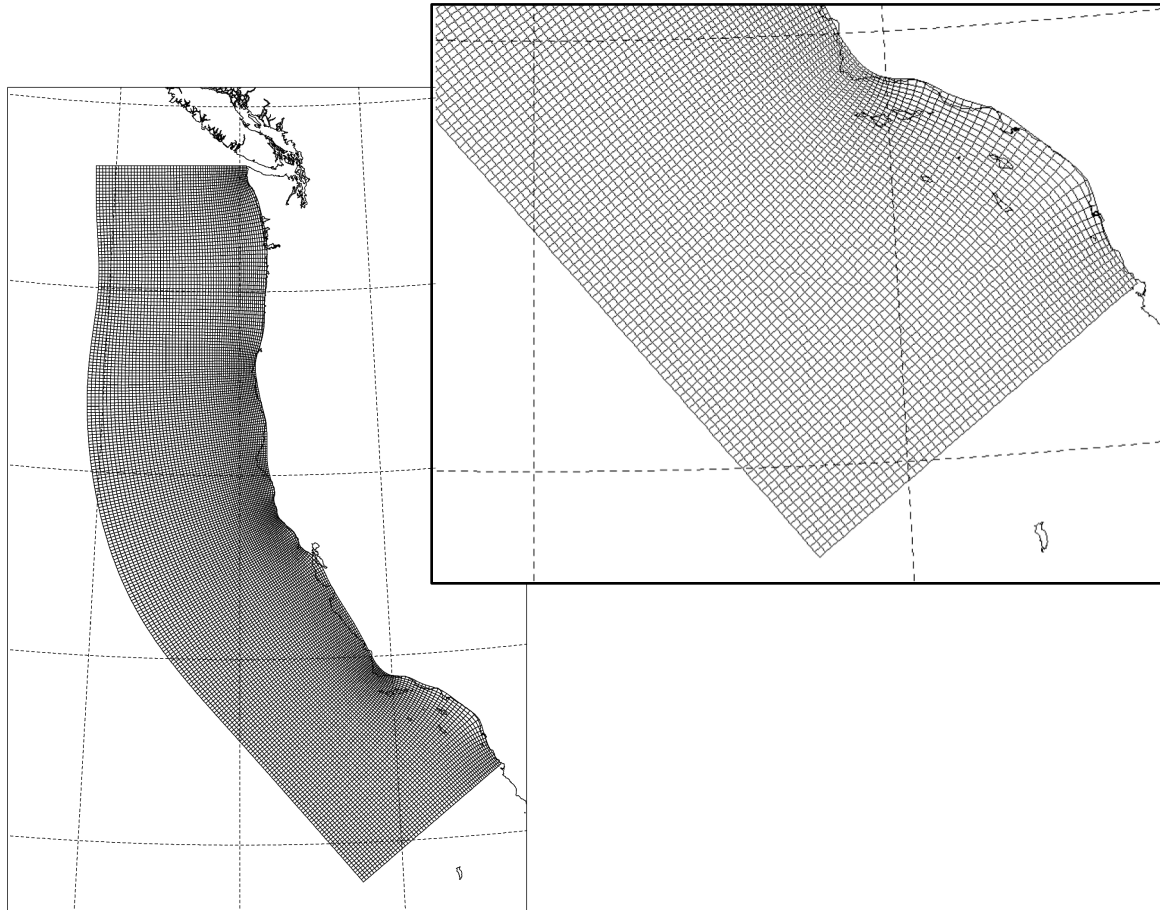

- **Pavel Sakov's code:**
<https://github.com/phobson/pygridgen>
- **Gridbuilder:**
<https://austides.com/downloads/>
- **Liz and Alistair's new thing**
- **WRF Domain Wizard**
- **My weird old stuff (from John Wilkin)**

Example Domains

US West Coast

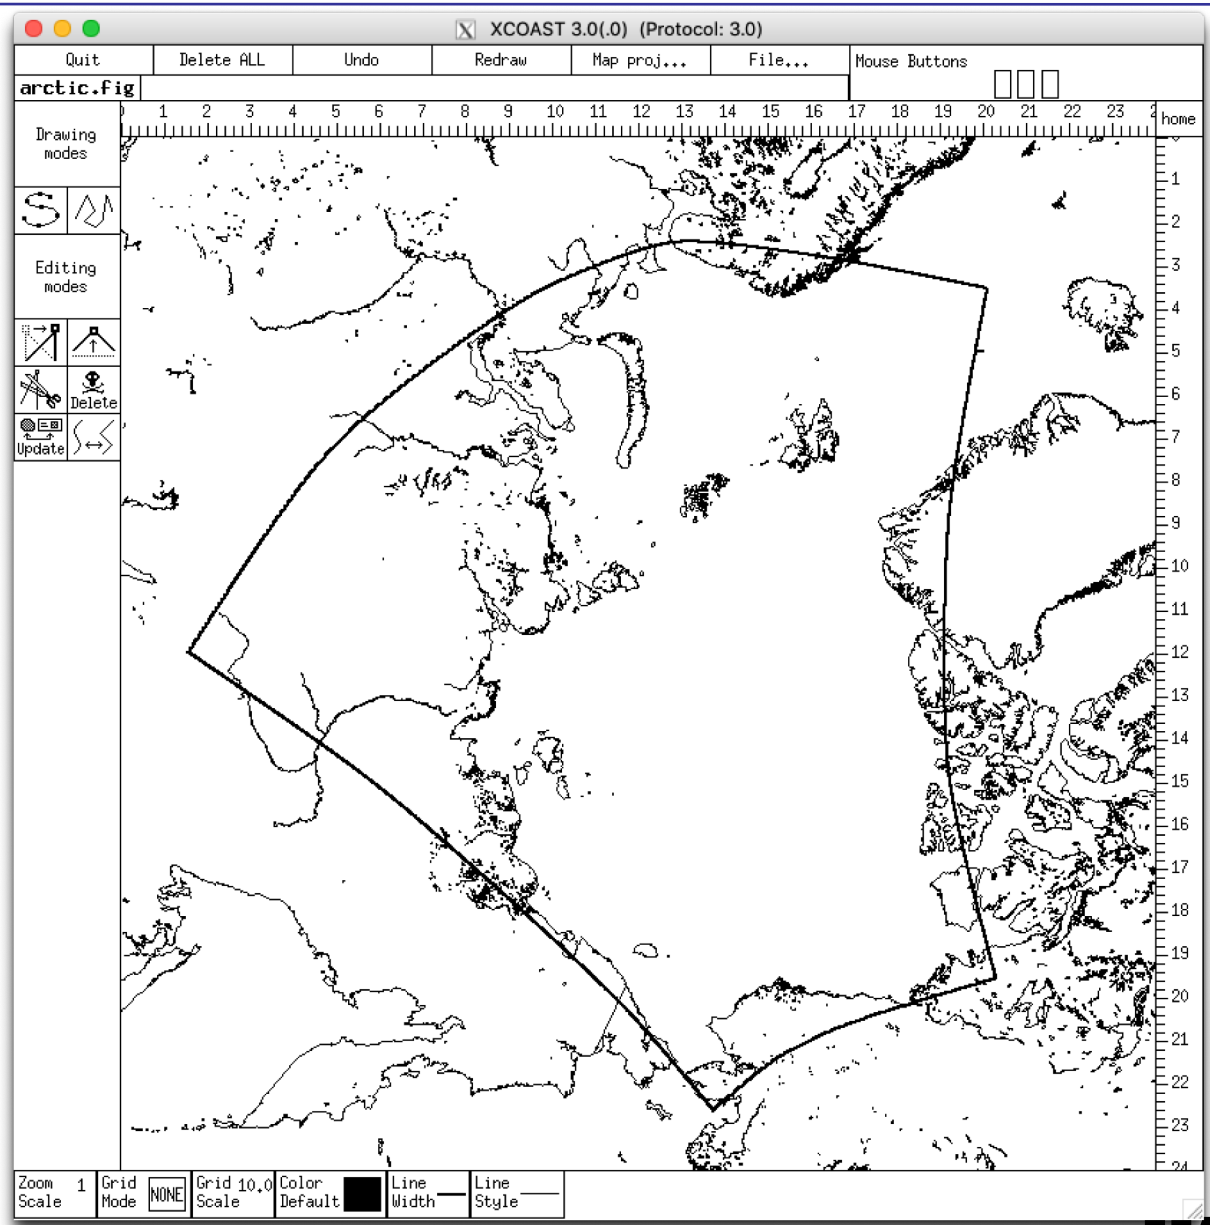

dy

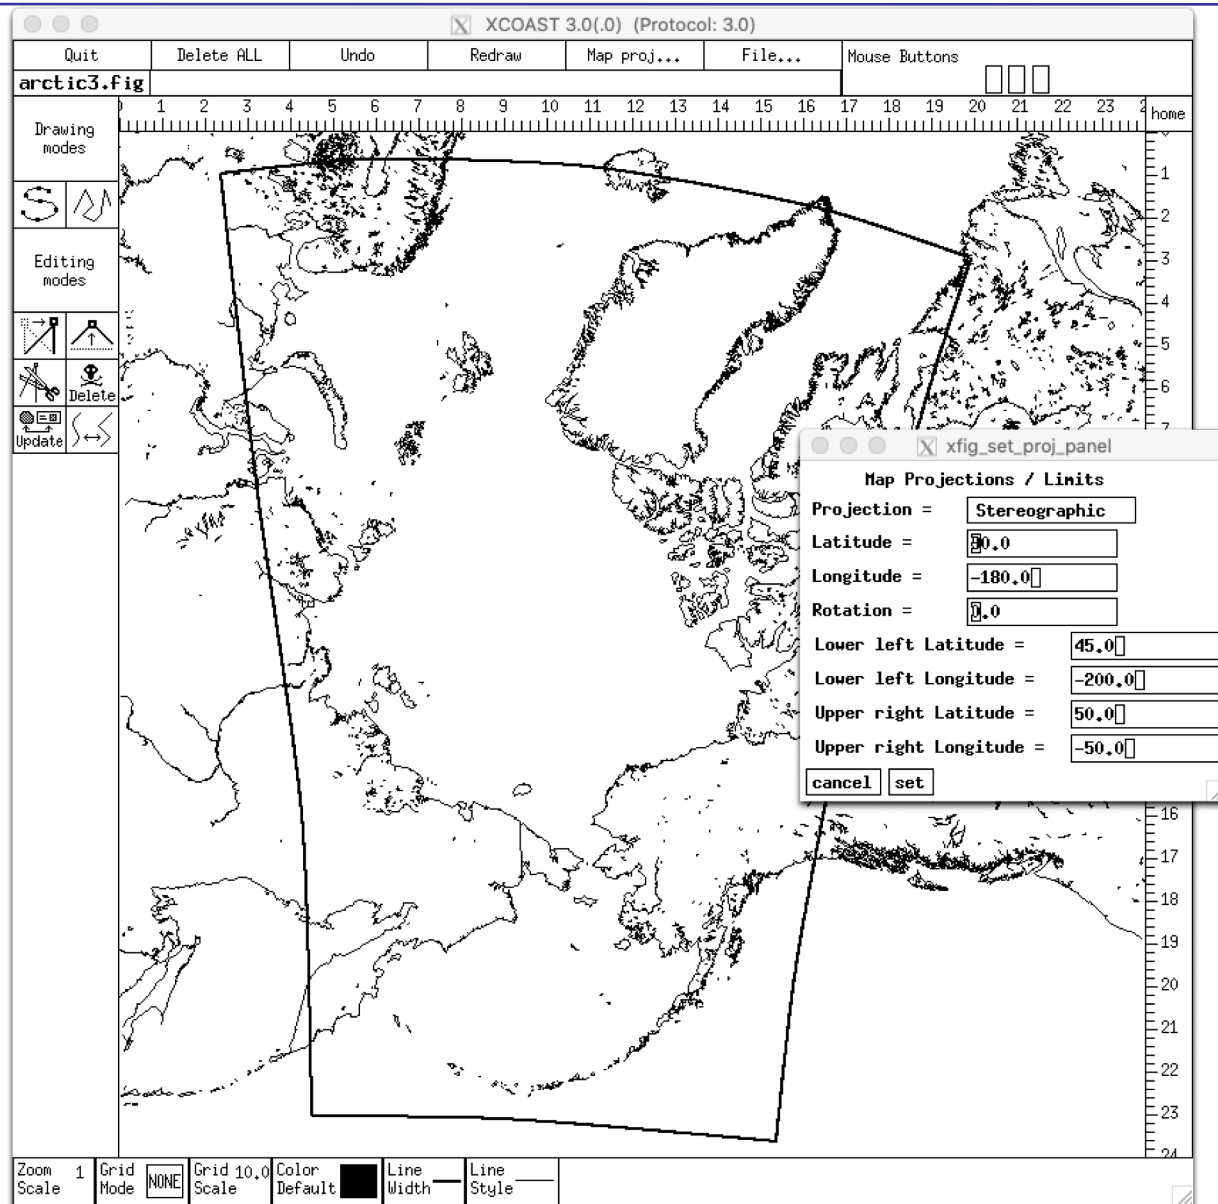

Arctic 1

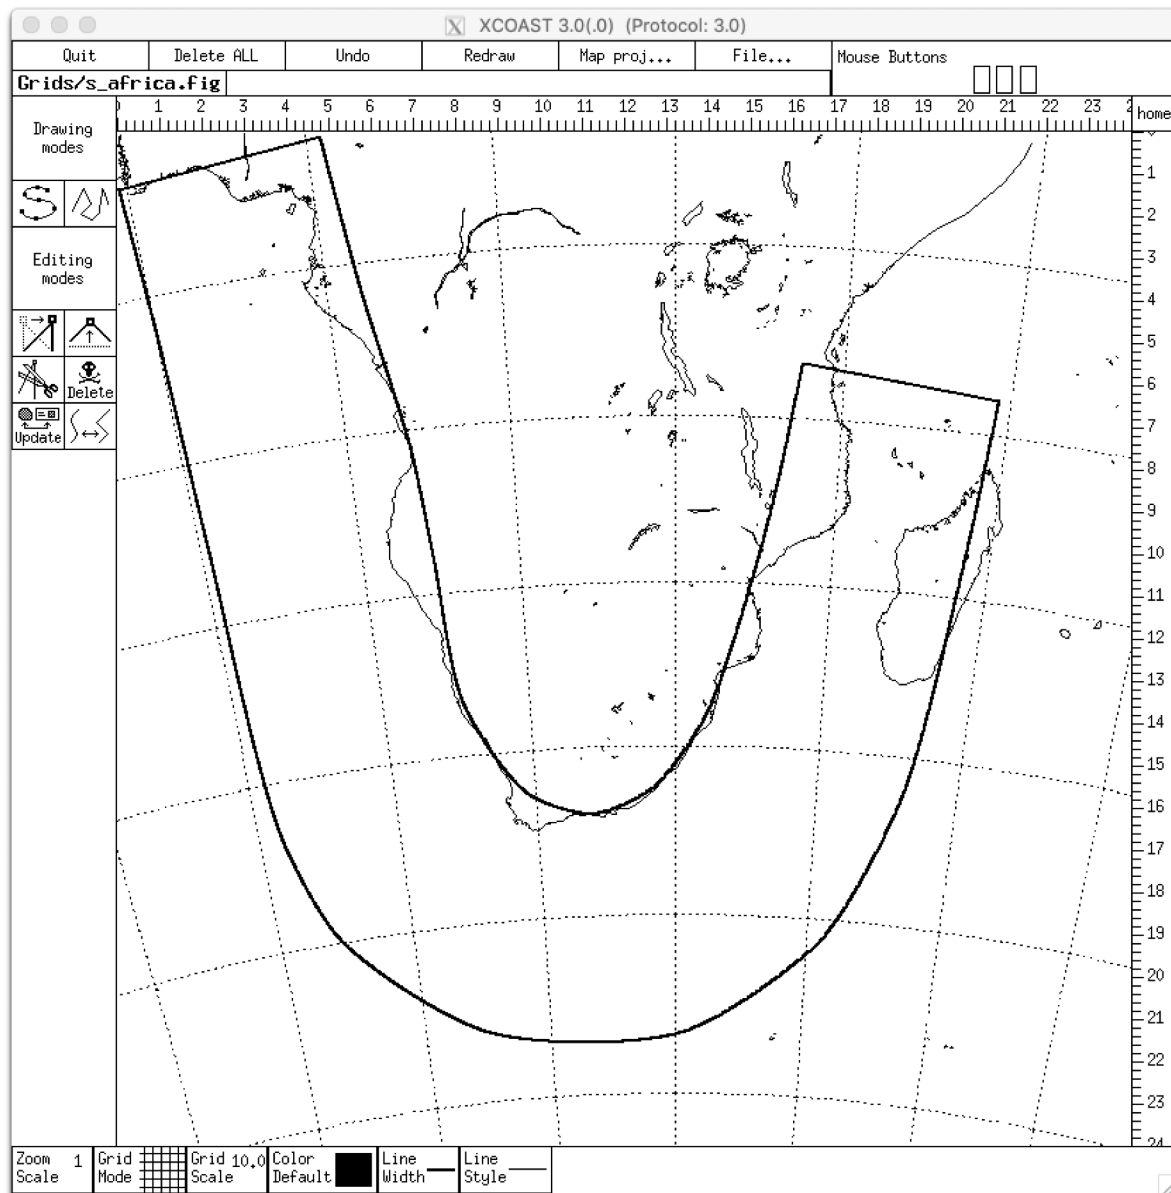

Arctic 2

Southern Africa

Bottom Topography

MIN DEPTH = 10.000

MAX DEPTH = 7380.2

NEP 5

CCS1

XCOAST 3.0(0) (Protocol: 3.0)

NEP 7

Bering Sea (WRF grid by Rob Cermak)

Fields on the Grid

- **Bathymetry**
 - Remap from the best you can get for your region
 - Many global products are derived from satellites and have odd pits and bumps
 - NEP, Bering, and Arctic bathymetry from IBCAO4 where it exists, ARDEM2 where it exists, SRTM30 for the rest

Land Mask

- **Sasha Shchepetkin's tools:**

<http://www.atmos.ucla.edu/~alex/ROMS/tools.tar>

- **gshhs_to_roms_mask roms_grid.nc**
- **copymask mask.nc roms_grid.nc**
- **single_connect i0 j0 roms_grid.nc**
- **These are Fortran, specific to ROMS files**

Land Mask

- **PYROMS contains editmask
(<https://github.com/ESMG/pyroms>)
GUI for editing the land mask**
- **There's a matlab version of this
too:
https://www.myroms.org/wiki/Land_Sea_Masking_Scripts**

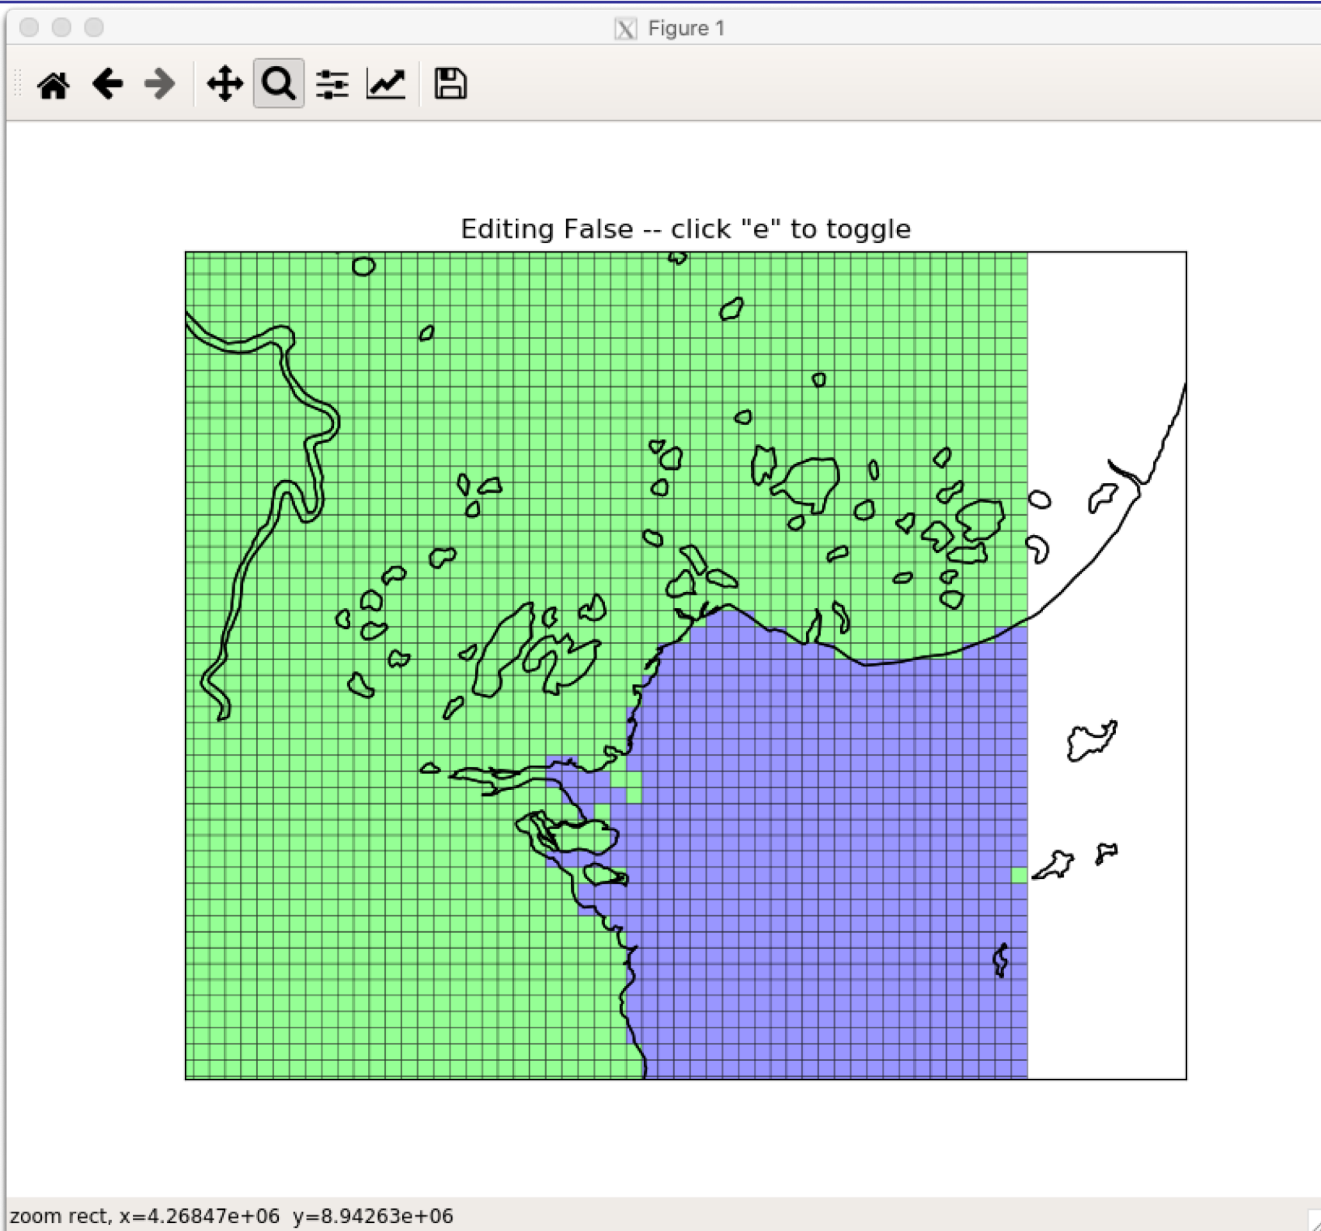

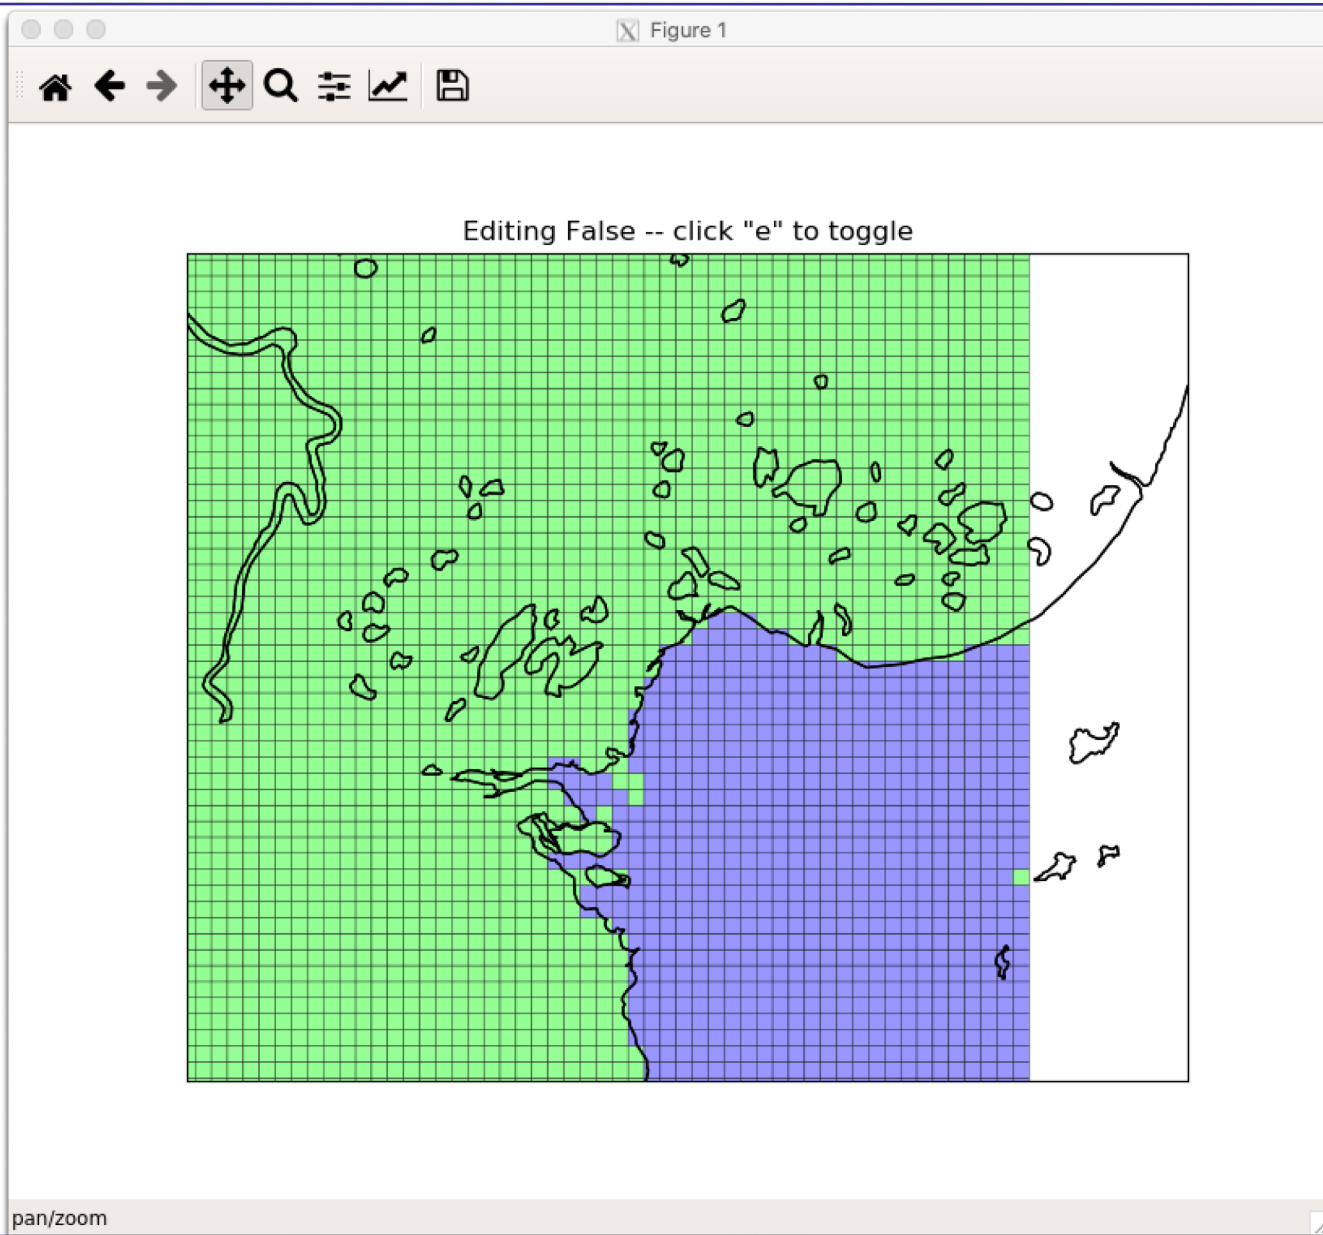

Land Mask

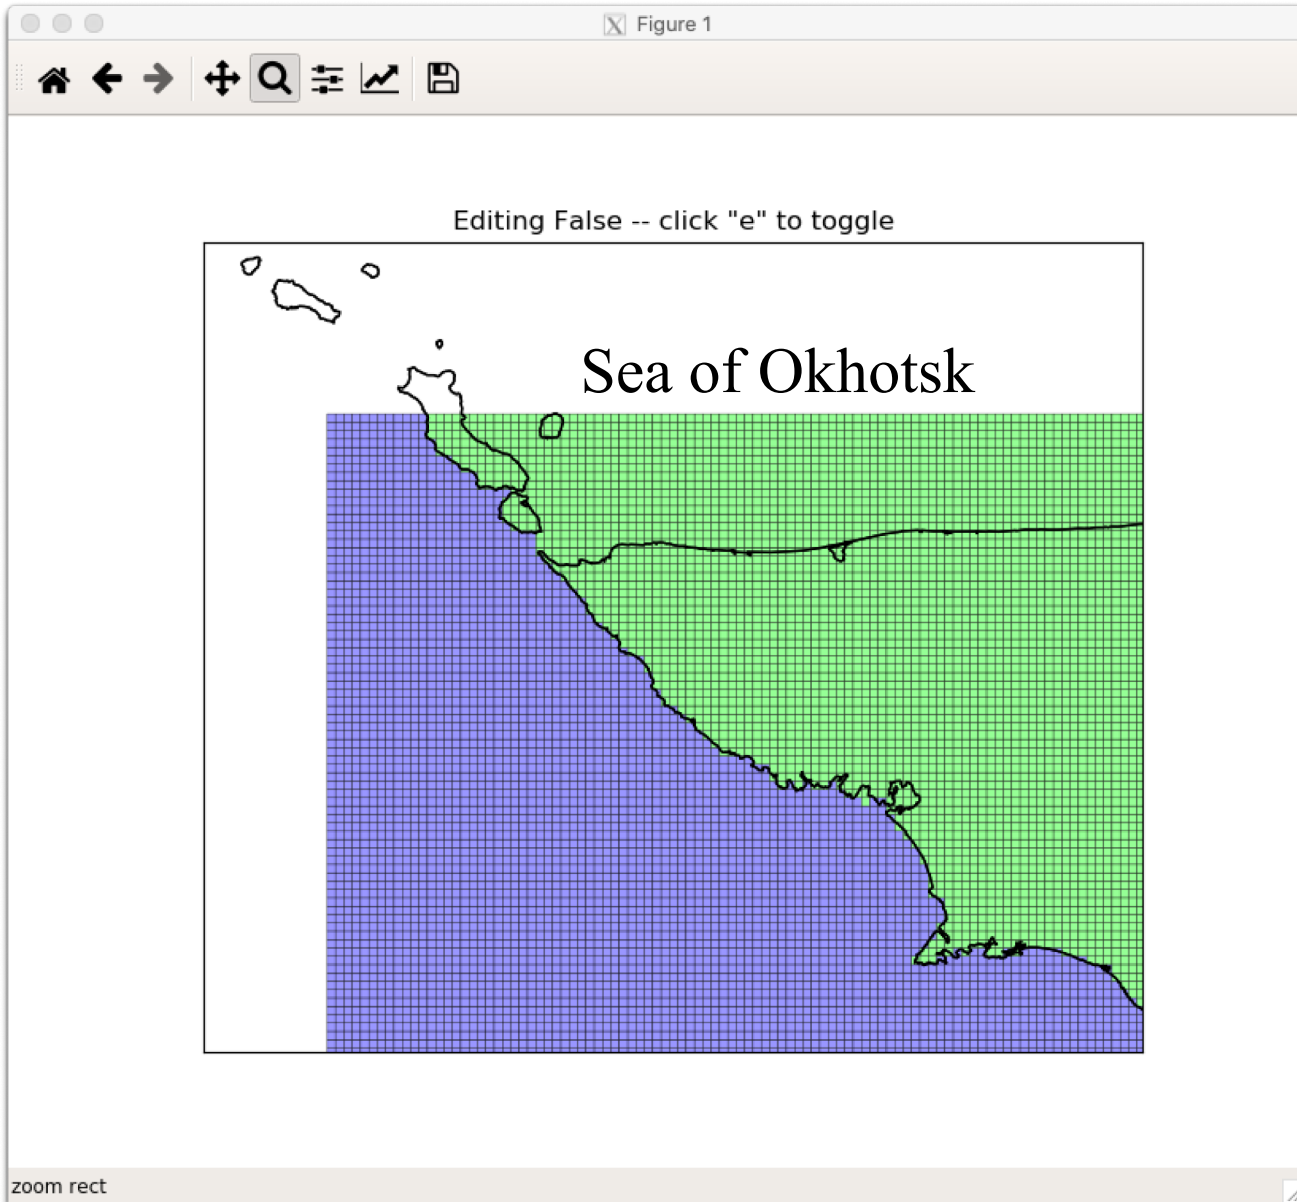

- **Need to avoid little bays at the boundary:**

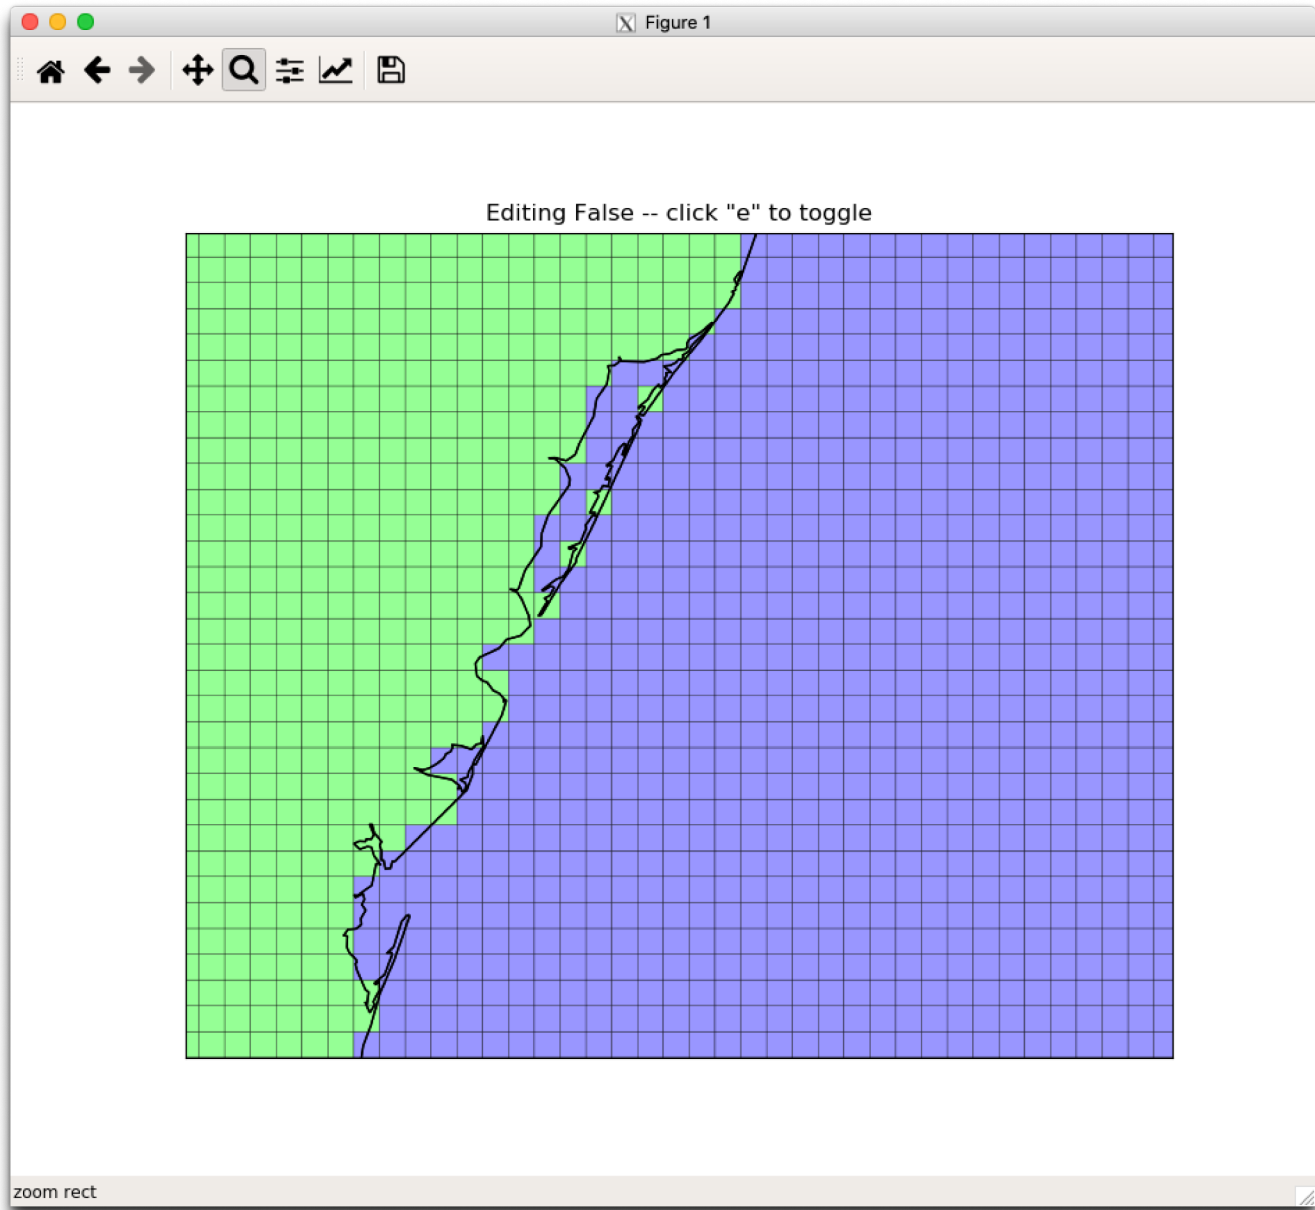

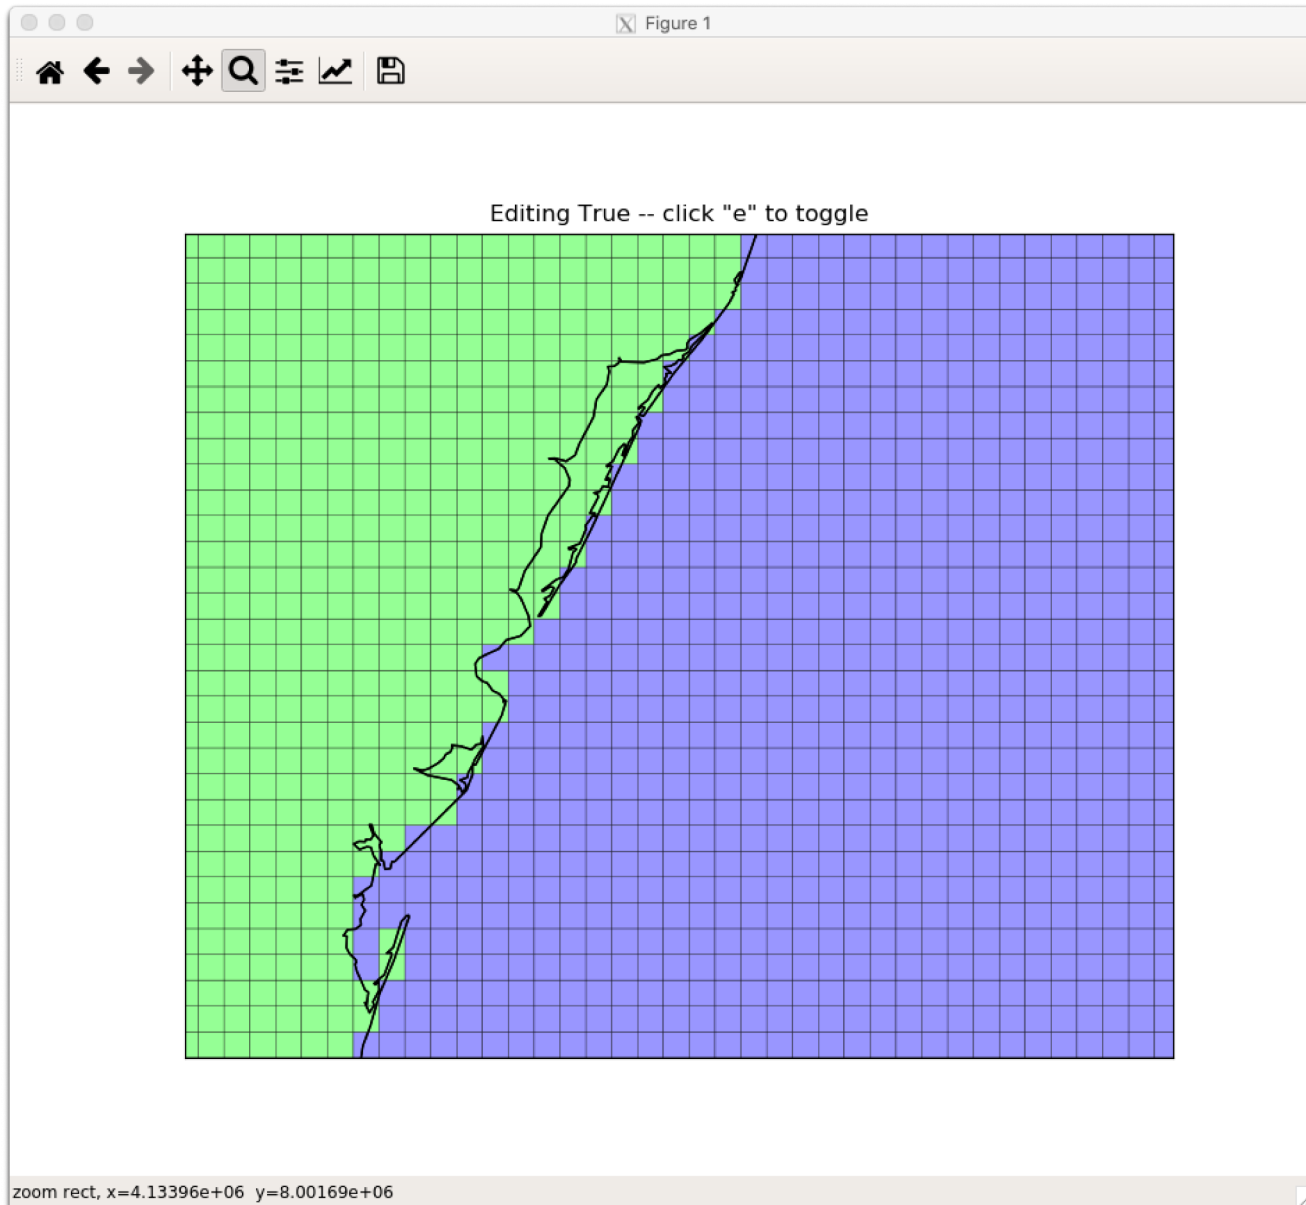

OBC

All Models Want the Same Fields

- **I build ROMS grids, convert to whatever:**
 - CICE/POP
 - MOM6
 - CESM
- **I also have a WRF to ROMS converter**
- **Check angle across dateline!**

After the Grid

- **OBC/IC files**
 - https://github.com/ESMG/PyCNAL_regridding
 - https://github.com/ESMG/regionalMOM6_notebooks
- **Forcing**
- **Runoff**

Runoff from JRA

year=1990

```
python regrid_runoff.py ocean_hgrid.nc \  
ocean_mask.nc \  
/import/c1/AKWATERS/kate/JRA55-  
do/runoff_JRA55-do-1-4-0_${year}.nc \  
Arctic5_runoff_${year}.nc -z \  
--regional_domain -r friver --progress \  
--fast_pickle --fms
```

```
python modify_regrid_output.py ${year}
```

MOM6 ascii inputs

- **data_table**
- **diag_table**
- **MOM_input**
- **input.nml**

data_table

```
"ATM" , "p_surf"      , "Pair"      ,  
  "/center1/AKWATERS/kate/JRA55-  
do/JRA55DO_1.4_Pair_2011.nc"      , "bilinear" , 1.0  
:  
"OCN" , "runoff"      , "friver"    ,  
  "./INPUT/runoff_file.nc"      , "none"    , 1.0  
"ICE" , "lw_flux_dn"   , "lwrad_down" ,  
  "/center1/AKWATERS/kate/JRA55-  
do/JRA55DO_1.4_lwrad_down_2011.nc" , "bilinear"  
 , 1.0  
:
```

MOM_input OBC Options

- **All spelled out at:**
<https://github.com/NOAA-GFDL/MOM6-examples/wiki/Open-Boundary-Conditions>
- **Subject to change**
- **Some are per segment, some apply to all segments**
- **Let us know if it is unclear!**

Open Boundary Segments

- **Tell how many:**

```
OBC_NUMBER_OF_SEGMENTS = 2
```

- **Where and what kind:**

```
OBC_SEGMENT_001 =
```

```
    "I=N, J=0:N, FLATHER"
```

```
OBC_SEGMENT_002 =
```

```
    "I=0, J=N:0, SIMPLE"
```

- **“N” is code for “end”**
- **Index order (direction) matters!**

Bering MOM_input

OBC_NUMBER_OF_SEGMENTS = 4

OBC_FREESLIP_VORTICITY = False

OBC_COMPUTED_VORTICITY = True

OBC_FREESLIP_STRAIN = False

OBC_COMPUTED_STRAIN = True

OBC_ZERO_BIHARMONIC = True

Bering MOM_input

OBC_SEGMENT_001 =

**"J=N,I=N:0,FLATHER,ORLANSKI,NUDGED,ORLANSKI
_TAN,NUDGED_TAN" !**

OBC_SEGMENT_002 =

**"I=0,J=N:0,FLATHER,ORLANSKI,NUDGED,ORLANSKI_
TAN,NUDGED_TAN" !**

OBC_SEGMENT_003 =

**"J=0,I=0:N,FLATHER,ORLANSKI,NUDGED,ORLANSKI_
TAN,NUDGED_TAN" !**

OBC_SEGMENT_004 =

**"I=N,J=0:N,FLATHER,ORLANSKI,NUDGED,ORLANSKI
_TAN,NUDGED_TAN" !**

Bering MOM_input

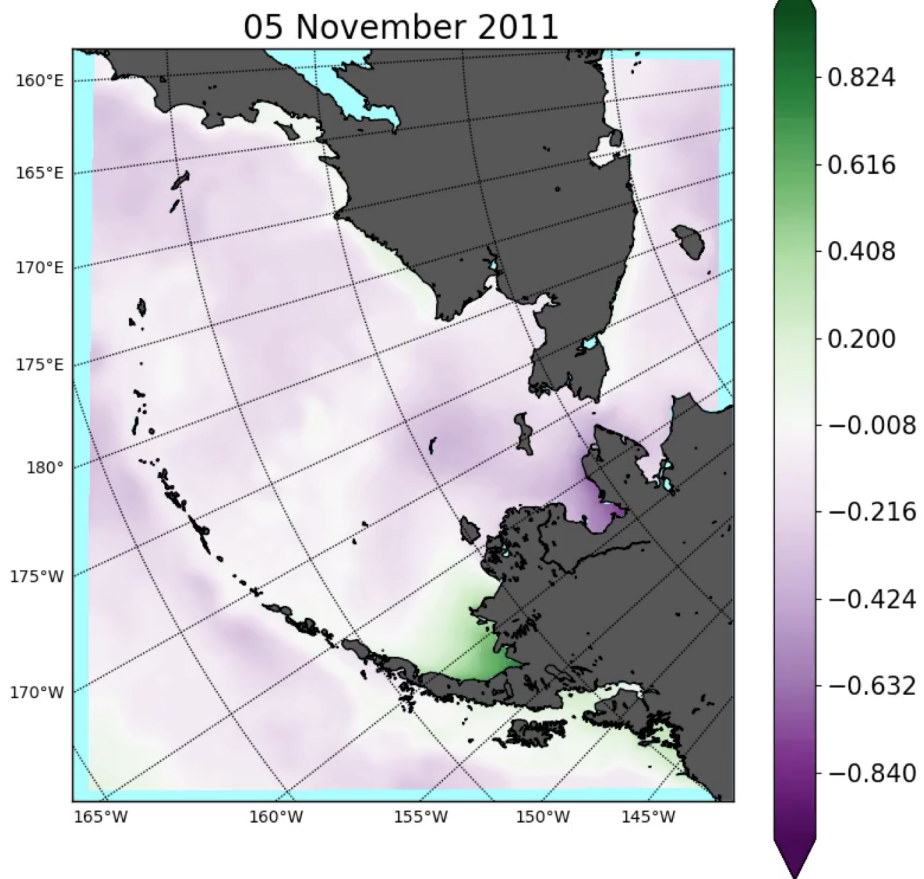

**OBC_SEGMENT_001_VELOCITY_NUDGING_TIMESCALES
= 3, 360.0**

BRUSHCUTTER_MODE = True

**OBC_SEGMENT_001_DATA =
"U=file:Bering_OBC.nc(u),V=file:Bering_OBC.nc(v),SS
H=file:Bering_OBC.nc(zeta),TEMP=file:Bering_OBC.nc
(temp),SALT=file:Bering_OBC.nc(salt)"**

**OBC_TRACER_RESERVOIR_LENGTH_SCALE_OUT =
3000.0**

**OBC_TRACER_RESERVOIR_LENGTH_SCALE_IN =
3.0E+04**

Future Work

- **Tides**
- **Better Python tools for pre- and post-processing**
- **Landfast ice parameterizations**
- **Algorithmic stability**
