Exercise 6:

Branch from Exercise.5. Run 5 days (or 1 month). Include all previous modifications. Also double the CO2 and N2O values. CO2 needs to be consistent across model components. Hint: Some things can be modified via env\_conf.xml and others post configure. Be sure to update your README.case file to keep track of your changes. The model will run regardless of whether or not your remember to include all of your changes. Check your buildnml scripts and the processed namelist files (\$RUNDIR/<model>\_in files) to make sure all changes are included. If you like, resubmit and continue the run for 1 more month.

NOTE: for the following line by line instructions, i will assume student ran exercise 5 for 1 month and will run exercise 6 for 1 month.
