

International LAnd Model Benchmarking (ILAMB) Project

**Jim Randerson, Forrest Hoffman, Bill Riley, Dave
Lawrence, Mingquan Mu, Charlie Koven, Gretchen
Keppel Aleks**

ILAMB Goals

- Develop benchmarks/metrics for land model performance, with emphasis on breadth (carbon cycle, ecosystem, surface energy, and hydrological processes)
- Support the design and development of a new, open-source, benchmarking software system for diagnostics and MIPs
- Strengthen linkages between experimental, monitoring, remote sensing, and climate modeling communities in design of model tests and new measurement programs

Potential metrics for inclusion in a comprehensive land benchmarking/metric system

- Large-scale state and flux estimates
 - LH, SH, total water storage, albedo, river discharge, SCF, LAI, soil and veg C stocks, GPP, NEE, ER, burnt area, permafrost distribution, T_{2m} , P, ...
 - RMSE, spatial pattern corr, interannual variance, annual cycle phase, trends
- Functional relationships and emergent properties
 - soil moisture – ET, soil moisture – runoff, precip – GPP, stomatal response to VPD, precip – burnt area, transient carbon storage trajectory, runoff ratio, spring albedo transition
- Experimental manipulation (testing model functional responses)
 - Nitrogen additions, FACE, artificial warming, rainfall exclusion, ecosystem response to disturbance

International LAnd Model Benchmarking (ILAMB) project

Variables and Visualization within ILAMB

- Currently integrates analysis of 25 variables in 4 categories from ~60 datasets
 - Above ground live biomass, burned area, carbon dioxide, gross primary production, leaf area index, global net ecosystem carbon balance, net ecosystem exchange, ecosystem respiration, soil carbon
 - evapotranspiration, latent heat, sensible heat, runoff, evaporative fraction, terrestrial water storage anomaly
 - albedo, surface upward SW radiation, surface net SW radiation, surface upward LW radiation, surface net LW radiation, surface net radiation
 - surface air temperature, precipitation, surface relative humidity, surface downward SW radiation, surface downward LW radiation
- Graphics and scoring system
 - annual mean, bias, relative bias, RMSE, seasonal cycle phase, spatial distribution, interannual variability, variable-to-variable
 - Global maps, time series plots averaged over specific regions, individual measurement sites, functional relationships

Examples of ILAMB metrics / plots

Global bias, relative bias, RMSE

2-d histograms

Process-oriented metrics: heat transfer through snow

Process-oriented metrics: heat transfer through snow

Summary

- ILAMB useful tool for model development and assessment
 - Along with tower site simulations, other diagnostics packages, scientific insight and intuition, case studies, etc.
- Provides quick and comprehensive comparison against growing set of observations and metrics
- Future development of ILAMB to enhance utility in model development
 - Parallelization
 - Compare against years outside observational period (e.g. 1850 control)

Global Variables ([Info](#) for Weightings)

	CLM45bgc_2degGSWP3	CLM5bgc01_2degGSWP3
