# CAM6 User Guide: Chemical mechanisms

[https://ncar.github.io/CAM/doc/build/html/users\\_guide/CAM-chem-specifics.html#chemical-mechanisms](https://ncar.github.io/CAM/doc/build/html/users_guide/CAM-chem-specifics.html#chemical-mechanisms)

## 9.1. Chemical mechanisms

CESM2.0 supports 6 chemical mechanism (as listed in the Table). The CESM chemical mechanism is a set used to calculate chemical reactions using the chemical preprocessor ([http://www.cesm.ucar.edu/working\\_groups/Chemistry/chemistry\\_preprocessor.pdf](http://www.cesm.ucar.edu/working_groups/Chemistry/chemistry_preprocessor.pdf)). For existing compsets the preprocessor has been used to compile fortran routines required to run the model: under \$CCSMROOT/components/cam/src/chemistry/.

Mechanism (pre-processor code)	Model: Chemistry Description	#Species	#Reactions
TSMLT1 (pp_waccm_tsmlt_mam4)	WACCM: Troposphere, stratosphere, mesosphere, and lower thermosphere	231 solution, 2 invariant	583 (433 kinetic, 150 photolysis)
TS1 (pp_trop_strat_mam4_vbs)	CAM-chem: Troposphere and stratosphere	221 solution, 3 invariant	528 (405 kinetic, 123 photolysis)
MA (pp_waccm_ma_mam4)	WACCM: Middle atmosphere (stratosphere, mesosphere, and lower thermosphere)	98 solution, 2 invariant	298 (207 kinetic, 91 photolysis)
MAD (pp_waccm_mad_mam4)	WACCM: Middle atmosphere plus D-region ion chemistry	135 solution, 2 invariant	593 (489 kinetic, 104 photolysis)
SC (pp_waccm_sc_mam4)	WACCM: Specified chemistry	29 solution, 8 invariant	12 (11 kinetic, 1 photolysis)
CAM	CAM: Aerosol chemistry	25 solution, 7 invariant	7 (6 kinetic, 1 photolysis)

# CESM2.1 WACCM6 data ocean configurations

# CAM6 User Guide: WACCM-X compsets

[https://ncar.github.io/CAM/doc/build/html/users\\_guide/atmospheric-configurations.html#waccm-x-compsets](https://ncar.github.io/CAM/doc/build/html/users_guide/atmospheric-configurations.html#waccm-x-compsets)

## 4.6. WACCM-X compsets

WACCM-X has three compsets/resolutions which are supported scientifically. These compsets are detailed in the following table. A specific compset may be listed below, but unless the resolution is also listed, that compset/resolution combination is not scientifically supported. Different resolutions exhibit different behavior and as a result require different tunings. The scientifically supported designation is limited to the specific compset/resolution pairs listed in the following table.

### Scientifically supported WACCM-X compsets

Compset Name	Supported Resolution	Description	Period
FXHIST	f19_f19_mg16	Historical WACCM-X based on CAM4 using 2 degree FV dycore, MA chemistry, CCMI emissions, historical SSTs, coupled to land, prescribed ice, river	2000 to 2015
FX2000	f19_f19_mg16	Year 2000 WACCM-X based on CAM4 2 degree FV dycore, using MA chemistry, year 2000 CCMI emissions and SSTs, coupled to interactive land, prescribed ice, river	2000
FXSD	f19_f19_mg16	Historical SD-WACCM-X based on CAM4 using 2 degree FV dycore, MERRA1 with a 50-hour relaxation, MA chemistry, CCMI emissions, historical SSTs, coupled to interactive land, prescribed ice, river	2000 to 2015

It should be noted that these WACCM-X compsets are based on the previous version 4 of CAM/WACCM and therefore are not derivatives of the version 6 CAM/WACCM compsets described above.

Planned WACCM-X update to CAM6 physics to come later (estimated end of 2019).

# CAM6 User Guide: CAM-chem compsets

[https://ncar.github.io/CAM/doc/build/html/users\\_guide/atmospheric-configurations.html#cam-chem-tested-compsets](https://ncar.github.io/CAM/doc/build/html/users_guide/atmospheric-configurations.html#cam-chem-tested-compsets)

## 4.4. CAM-chem tested compsets

CAM-chem tested compsets in CESM2.0 (CAM-chem scientifically supported compsets will be available in CESM2.1)

CAM-chem has a number of compsets/resolutions which are tested in CESM2.0, see Table. All available compsets use observed SSTs and sea-ice values and CMIP6 emissions until 2015. Specified dynamics compsets are nudged to winds, temperature and surface fluxes and run on 56 levels, aligned with the MERRA2 vertical levels. Additional SD configurations are tested to run with 32 levels that are not available at this point. Half-degree SD compsets use 1-degree emissions. Users have to change to half-degree emissions if desired.

Compset Name	tested resolution	Description	Period
FCHIST	f09_f09_mg17	Historical CAM6-chem using 1 degree FV dycore, using CMIP6 emissions, coupled to interactive land and MEGAN2.1	1979 to 2015
FCSD	f09_f09_mg17	Historical CAM6-chem 1deg compset using MERRA2 analysis with a 50-hour relaxation. See details in the text	1980 to 2015
FCSD	f05_f05_mg17	Historical CAM6-chem half deg compset using MERRA2 analysis	1980 to 2015
FC2000climo	f09_f09_mg17	Climatological CAM6-chem using 1 degree FV dycore, averaged SSTs, emissions, and lower boundary conditions (1995-2005)	1995-2005 average climo
FC2010climo	f09_f09_mg17	Climatological CAM6-chem using 1 degree FV dycore, averaged SSTs, emissions, and lower boundary conditions (2006-2014)	2006-2014 average climo

**Additional compsets will be released later**

## Exercise 1: Run a present-day compset

- Go to the script directory in your source code
- Run `create_newcase` command for one of these configurations:

**WACCM:** `--compset FW2000climo --res f09_f09_mg17`

**CAM-chem:** `--compset FC2000climo --res f09_f09_mg17`

**WACCM-X:** `--compset FX2000 --res f19_f19_mg16`

**CASENAME:** `~/f.e21.$compset.$res.tutorial.test1`

i.e. for **CAM-chem:** `f.e21.FC2000climo.f09_f09_mg17.tutorial.test1`

- Go to your case directory and setup and build the model
- Add or modify history stream 2 (`fincl2`) to output daily instantaneous values of: `'PS','Z3','T','U','V','O3'`

Change `user_nl_cam`: `fincl2, avgflag_pertape, mfilt, nhtrfq`

- Run the model for 5 days
- Check your model output in your run directory

# Exercise 1: Run a present-day WACCM/CAMChem compset

**Important! Check the newly generated namelist prior run**

➤ `ls CaseDocs/*`

```
atm_in          cpl_modelio.nml          glc_modelio.nml  ocn_modelio.nml
atm_modelio.nml docn_in                  ice_in           rof_modelio.nml
chem_mech.doc   docn.streams.txt.prescribed ice_modelio.nml  seq_maps.rc
chem_mech.in    drv_flds_in             lnd_in           wav_modelio.nml
cism.config     drv_in                  lnd_modelio.nml
cism_in         esp_modelio.nml         mosart_in
```

- **atm\_in:** atmospheric namelist variables
- **chem\_mech.in:** chemical mechanism file
- **drv\_flds\_in:** dry deposition variables, MEGAN variables (if used)
- **lnd\_in:** land namelist variables
- ...

## Exercise 2: Building the model with new chemistry

- Setup a new case as done in Exercise 1, with case name `~/f.e21.$compset.$res.tutorial.test2`
- Look at your chemistry preprocessor file `chem_mech.in` in `CaseDocs` and copy it to your case directory
  - `less CaseDocs/chem_mech.in`
  - `cp CaseDocs/chem_mech.in my_chem_mech.in`

# The chemical preprocessor and the mechanism file

The **chemistry preprocessor**: generates CAM Fortran source code to solve chemistry.

Input: a simple ASCII file listing chemical reactions and rates.

The chemistry preprocessor input file used in your previous run is in your `$CASEROOT/CaseDocs/chem_mech.in`

Additional input files for default chemical mechanisms are in each source code subdirectory for mechanisms under `$SRCROOT/components/cam/src/chemistry/pp_*` (i.e. `pp_waccm_tsmlt_mam4`)

```

SPECIES
  Solution
03, O, O1D -> O, O2, O2_1S -> O2, O2_1D -> O2
  End Solution

  Fixed

  End implicit
End Solution Classes

CHEMISTRY
  Photolysis
[jo2_a] O2 + hv -> O + O1D
  End Photolysis

  Reactions
[cph1,cph] O + O3 -> 2*O2 ; 8e-12, -2060
  End Reactions
END CHEMISTRY

```

# Reaction rate types in the chempp input file

- **Temperature-independent rates:**  $k$  [cm<sup>3</sup> molec<sup>-1</sup> s<sup>-1</sup>] =  $a_0$

```
O1D + H2O -> 2*OH ; 2.2e-10
```

- **Arrhenius type:**  $k = a_0 \cdot \exp(b_0/T)$ , where  $b_0 = (-E/R)$

```
O + O3 -> 2*O2 ; 8e-12, -2060
```

$a_0$ ,  $b_0$

- **Troe rate constant:**  $k = \alpha^x / (1 - \beta^2)$ , where:

$\alpha = k_0 \cdot M / k_\infty$ ,  $\beta = \log_{10}(\alpha)$ ,  $M$  = air density (molec cm<sup>-3</sup>),  $T$  = temperature (K)

$k_0 = a_0 \cdot (300/T)^{a_1}$ ,  $k_\infty = b_0 \cdot (300/T)^{b_1}$ ,  $x$  = “exponential factor”

```
[usr11] CH3CO3 + NO2 + M -> PAN + M ; 8.5e-29, 6.5, 1.1e-11, 1., .6
```

$a_0$ ,  $a_1$ ,  $b_0$ ,  $b_1$ ,  $x$

- **User-specified reaction rate:**

```
[usr1] O + O2 + M -> O3 + M
```

rate defined in routine mo\_usrrxt.F90

## Exercise 2: Building the model with new chemistry

For WACCM / CAM-chem:

- Change reaction rates (bug in earlier version)

```

*****
*** odd-oxygen
*****
[ag1]          O2_1D  -> O2          ; 0.000258
[ag2]          O2_1S  -> O2          ; 0.085
[O1D_H2]       O1D + H2  -> H + OH   ; 1.2e-10
[O1D_H2O]      O1D + H2O -> 2*OH    ; 1.63e-10, 60
[O1D_N2,cph=189.81] O1D + N2 -> O + N2 ; 2.15e-11, 110
[O1D_O2,cph=32.91] O1D + O2 -> O + O2_1S ; 2.64e-11, 55
[O1D_O2b,cph=189.81] O1D + O2 -> O + O2 ; 6.6e-12, 55
[O1D_O3]       O1D + O3  -> O2 + O2  ; 1.2e-10
[O2_1D_N2,cph=94.3] O2_1D + N2 -> O2 + N2 ; 1e-20
[O2_1D_O,cph=94.3] O2_1D + O  -> O2 + O  ; 1.3e-16
[O2_1D_O2,cph=94.3] O2_1D + O2 -> 2*O2 ; 3.6e-18, -220
[O2_1S_CO2]    O2_1S + CO2 -> O2_1D + CO2 ; 4.2e-13

```

Change to 1.65e-12

- Edit your new mechanism file:
  - `nedit my_chem_mech.in`

## Exercise 2: Building the model with new chemistry

- Query the default CAM configure options:
  - `./xmlquery CAM_CONFIG_OPTS`  
CAM\_CONFIG\_OPTS: `-phys cam6 -chem trop_strat_mam4_vbs -age_of_air_trcs`
- Use `xmlchange` to append a pointer to your user mechanism:
  - `"--usr_mech_infile `pwd`/my_chem_mech.in"`
- When you query the updated CAM configure options, it should be appended:
  - `./xmlquery CAM_CONFIG_OPTS`  
CAM\_CONFIG\_OPTS: `-phys cam6 -chem trop_strat_mam4_vbs -age_of_air_trcs`  
`--usr_mech_infile`  
`/gpfs/u/home/<username>/f.e20.FC2000climo.f09_f09_mg17.tutorial.test2/`  
`my_chem_mech.in`
- Reset your case setup, and build again
- Submit a new run
- Check output and compare 5<sup>th</sup> day output to earlier run using `geov`

# Post-processing data analysis: GEOV

CESM history files are in standard netCDF format, and may be analyzed with standard analysis tools, including Matlab, IDL, NCL, and NCO.

GEOV is an IDL-based viewer for geophysical history files created by NCAR's CAM, WACCM and MOZART models.

GEOV can be downloaded from the WACCM webpage

[http://www.cesm.ucar.edu/working\\_groups/Whole-Atmosphere/code-release.html](http://www.cesm.ucar.edu/working_groups/Whole-Atmosphere/code-release.html)

Or install geov on cheyenne:

- Add idl module:

- `module load idl`

- Edit `.cshrc` file. Add line:

```
setenv IDL_STARTUP ~fvitt/idl_startup
```

- `~fvitt/idl_startup` sets the idl path to include GEOV:

```
idl_path = expand_path('+~fvitt/geov')
```

```
!path=!path+' '+idl_path
```

- `source .cshrc`

- `cd /glade/u/home/fvitt/geov4.8e`

- `idl geov`

# Solution 1:

## Run a present-day WACCM/CAMChem compset

- Go to the script directory in your source code

```
> cd /glade/p/cesm/tutorial/cesm2.1_tutorial_2021/cime/scripts
```

- Run create\_newcase command for one of these compsets:

```
CAM-chem: > ./create_newcase --compset FC2000climo --res f09_f09_mg17  
--case ~/f.e21.FC2000climo.f09_f09_mg17.tutorial.test1
```

```
WACCM: > ./create_newcase --compset FW2000climo --res f09_f09_mg17  
--case ~/f.e21.FW2000climo.f09_f09_mg17.tutorial.test1
```

```
WACCM-X: > ./create_newcase --compset FX2000 --res f19_f19_mg16  
--case ~/f.e21.FX2000.f19_f19_mg16.tutorial.test1
```

- Go to your case directory and setup the run
- Setup the model > ./case.setup
- Build the model: > qcmd -- ./case.build

namelists (atm\_in, ice\_in, lnd\_in, docn\_in) will appear in the CaseDocs subdirectory, as well as in your \$rundir

# Solution 1: How do I change model output?

- Update the user\_nl\_cam file in your \$casedir and add/change the fincl2 output

```
> nedit user_nl_cam
```

- Paste avgflag\_pertape, mfilt, nhtfrq from CaseDocs/atm\_in, i.e. for WACCM:

```
avgflag_pertape = 'A', 'A', 'A', 'A', 'A', 'A', 'A', 'A', 'I'  
mfilt           = 1,   30, 120, 240, 240, 480, 365, 73, 30  
nhtfrq         = 0,  -24,  -6,  -3,  -1,   1, -24,-120,-240
```

- Make changes:

```
avgflag_pertape = 'A', 'I', 'A', 'A', 'A', 'A', 'A', 'A', 'I'  
mfilt           = 1,   30, 120, 240, 240, 480, 365, 73, 30  
nhtfrq         = 0,  -24,  -6,  -3,  -1,   1, -24,-120,-240  
fincl2         = 'PS','Z3','T','U','V','O3'
```

- Preview namelists and make sure changes are in your CaseDocs/atm\_in file

```
> ./preview_namelists
```

- Check your CaseDocs/atm\_in

```
> less CaseDocs/atm_in
```

- Resubmit your job (run the model for 5 days)

```
> ./case.submit
```

# Solution 1: Check your model output

- **find your model output in your run dir (\$run\_dir) after finished:**

```
> ls /glade/scratch/<username>/<casename>/run
```

```

namelist information

restart information

- **find your model output in the short-time archive**

```
> ls /glade/scratch/<username>/archive/<casename>/...
```

(note: there will be no monthly values available if you just run for 5 days)

- **check your cam.h1 file**

```
> ncdump -h f.e21.FC2000climo.f09_f09_mgl7.tutorial.test1.cam.h1.0001-01-06-00000.nc
```

# Solution 2:

## Building the model with new chemistry

- Go to the script directory in your source code

➤ `cd /glade/p/cesm/tutorial/cesm2.1_tutorial_2021/cime/scripts`

### WACCM:

➤ `./create_newcase --compset FW2000climo --res f09_f09_mg17 --case ~/f.e21.FW2000climo.f09_f09_mg17.tutorial.test2`

➤ `cd $CASEROOT`

➤ `cp CaseDocs/chem_mech.in my_chem_mech.in`

➤ `nedit my_chem_mech.in &` (use any editor to edit your script)

```

-----
Reactions
-----
* Odd-Oxygen Reactions
* -----
[usr_0_02]      0 + O2 + M -> O3 + M
[O_03]         0 + O3 -> 2*O2                ; 8.00e-12, -2060.
[usr_0_0]      0 + O + M -> O2 + M

* -----
* Odd-Oxygen Reactions (O1D only)
* -----
[O1D_N2]      01D + N2 -> O + N2                ; 2.15e-11, 110.
[O1D_O2b]     01D + O2 -> O + O2                ; 3.30e-11, 55.
[ox_l1]       01D + H2O -> 2*OH                 ; 1.63e-10, 60.
[O1D_N20a]    01D + N2O -> 2*NO                 ; 7.25e-11, 20.
[O1D_N20b]    01D + N2O -> N2 + O2              ; 4.63e-11, 20.

```

Change to 1.65e-12 (bug in earlier version)

# Solution 2:

## Building the model with new chemistry

- Append pointer to user mechanism:
  - `xmlchange --append CAM_CONFIG_OPTS="--usr_mech_infile`pwd`/my_chem_mech.in"`
- Reset your case and re-build your run:
  - `./case.setup --reset`
  - `./case.build --clean`
  - `./case.build`
- submit the new run
  - `./case.submit`
- Check output after the run
  - `ls /glade/scratch/<username>/archive/<casename>/...`

# Solution 2: Building the model with new chemistry

- Compare your output with the other run, using geov
