

# **Community Land Model: Update on Progress, Plans, and Results from CCSM4 Simulations**

**David Lawrence**  
NCAR Earth System Laboratory  
with input from lots of LMWGers

NCAR is sponsored by the National Science Foundation

**Terrestrial Sciences Section  
Hard at work**

## Considering a “Cornice Parameterization” for CLM

Figure 1: Lawrence et al., Journal Advances Modeling Earth Systems, 2011

# Journal of Climate Special Collection papers

## CCSM4 submitted by May 1; CESM1 submitted by Aug 1

- The CCSM4 land simulation, 1850-2005: Assessment of surface climate and new capabilities (submitted)
  - Lawrence D et al.
- The biophysical and biogeochemical impacts of landcover and land use change over 20th and 21st centuries
  - Lawrence P et al.
- Contrasts between urban and rural climate in CCSM4 CMIP5 climate change scenarios(submitted)
  - Oleson
- Permafrost in CCSM4
  - Lawrence D et al.

- **Mean and variability of the carbon cycle in CESM1**
  - Lindsay et al.
- **The transient carbon cycle response in CESM1**
  - Lindsay et al.
- **An assessment of terrestrial carbon and nitrogen cycling in CESM1**
  - Thornton et al.
- **Dynamic Vegetation in CESM1**
  - Castillo et al.
- **Land-atmosphere interactions across several generations of CAM/CLM**
  - Lawrence D et al.
- **Crops in CESM1**
  - Levis et al.

# CCSM4 data

- 1850 control and 20<sup>th</sup> century and RCPs ensembles
  - All simulations: CLM is fully active with CN on and transient land cover change, aerosol and nitrogen deposition
  - Data posted on Earth System Grid (ESG) on or about May 1, 2011

## CESM 1.0 EXPERIMENTS / DIAGNOSTICS

[CESM1.0 Home Page](#)

### Stand-Alone Diagnostics

- [CAM4.0](#)
- [CAM5.0](#)
- [CLM4.0](#)
- [CICE4.0](#)
- [POP2](#)

Note that although CESM1.0 supersedes CCSM4.0, users can run equivalent CCSM4.0 experiments from the CESM1.0 code base. Also note that the CCSM4.0 experiments below are equivalent to running CESM1.0 (CAM4).

Note that all current CESM release codebases (e.g. cesm1\_0, cesm1\_0\_1 or cesm1\_0\_2) can also reproduce the climates shown below.

If you still have questions after reviewing the details of the model runs below, it is recommended that you contact the relevant [CESM Working Group Liaison](#).

Run Description	Diagnostics				Length of Run Diagnostics		
<b>CESM1 (BGC) Prognostic CO2 1° Pre-Industrial Control</b> (b40.coup_carb.004) <b>Res:</b> 1° atm/land, 1v6 ice/ocn <b>Years:</b> 1-1000 <b>Data Location:</b> <a href="#">ESG (years 351-380)</a> <input type="button" value="Details"/>	351-380 w/observations	Atm	Ice	Land	Ocean	CCR	Ocean Timeseries

Case Name: b40.coup\_carb.004  
 Machine: NCAR:bluefire  
 CMIP5 ID: 5.1  
 Compset: B1850BPRP  
 Resolution: 0.9x1.25\_gx1v6  
 Initial Conditions: year 351  
 Start/End Dates: 12/24/09, 12/17/10  
 Data Release Date (Full): 8/1/11

# T<sub>air</sub>: RMSE and Annual Mean Bias (CCSM4 vs CCSM3)

Reduced RMSE at high lats and in tropics

Mixed results for bias, E. Europe warm bias related to no aerosol indirect?

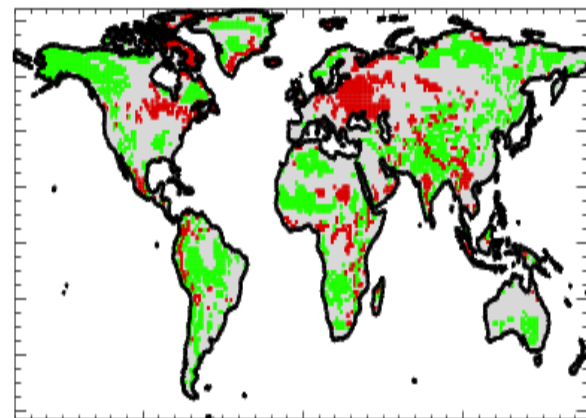

T<sub>air</sub> RMSE: CCSM3  
3.01°C

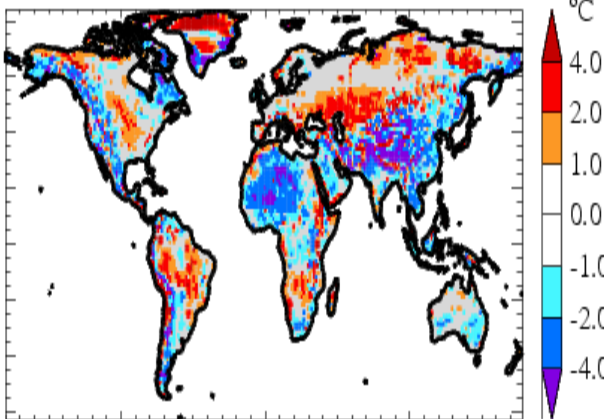

T<sub>air</sub> RMSE: CCSM4  
2.71°C

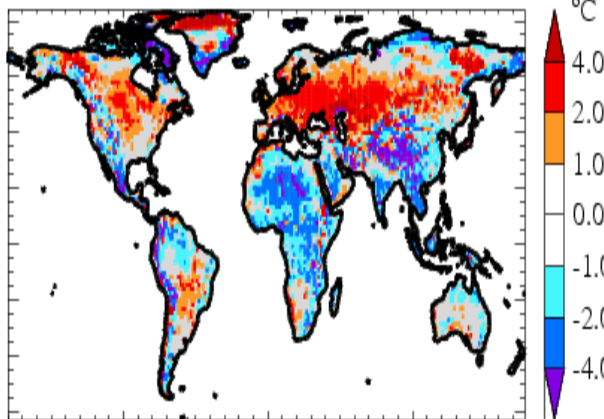

T<sub>air</sub> RMSE: CCSM4 vs CCSM3  
27.1%(+) 12.9%(-)

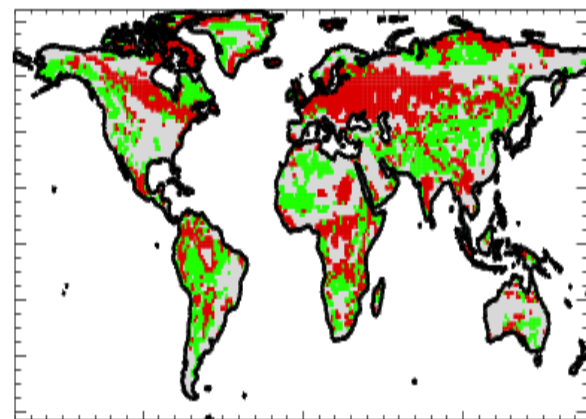

T<sub>air</sub> ANN Mean Bias: CCSM3  
-0.28°C

T<sub>air</sub> ANN Mean Bias: CCSM4  
-0.17°C

T<sub>air</sub> ANN Mean Bias: CCSM4 vs CCSM3  
27.7%(+) 28.3%(-)

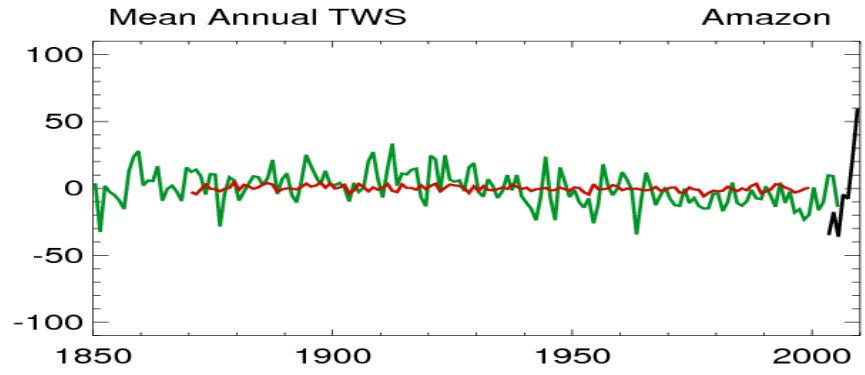

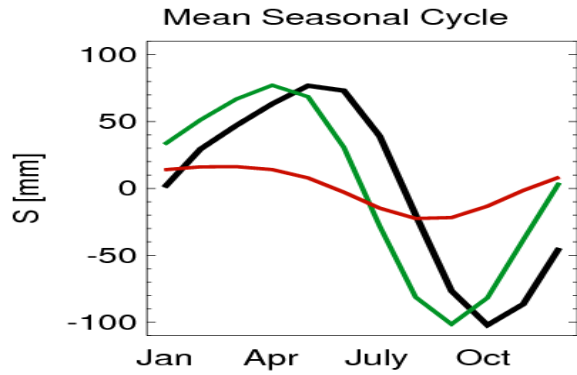

# Land temperature anomalies from 1961-1990

# Total Land Water Storage (CCSM vs GRACE)

— GRACE      — CCSM4      — CCSM3

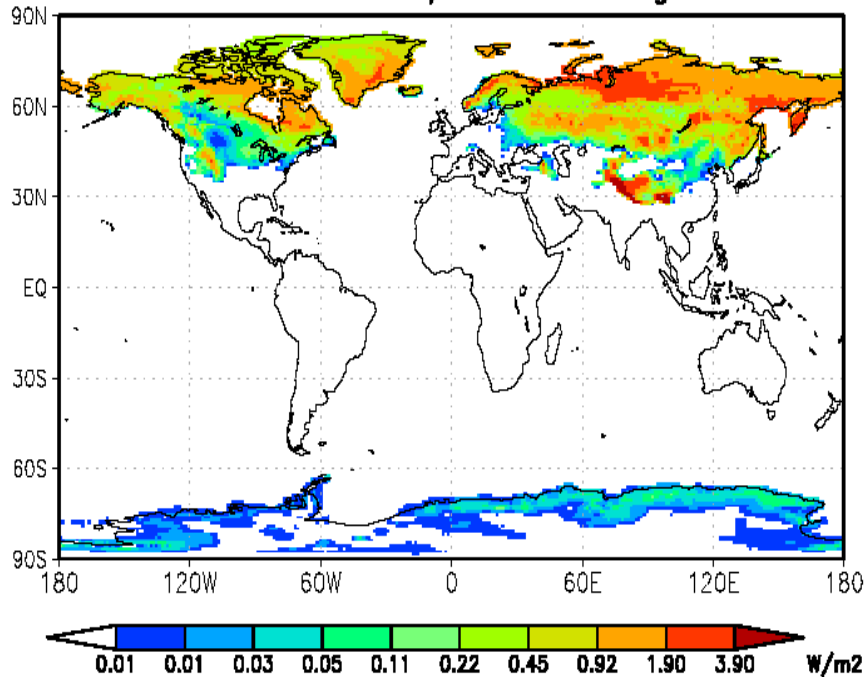

# Latent Heat Flux

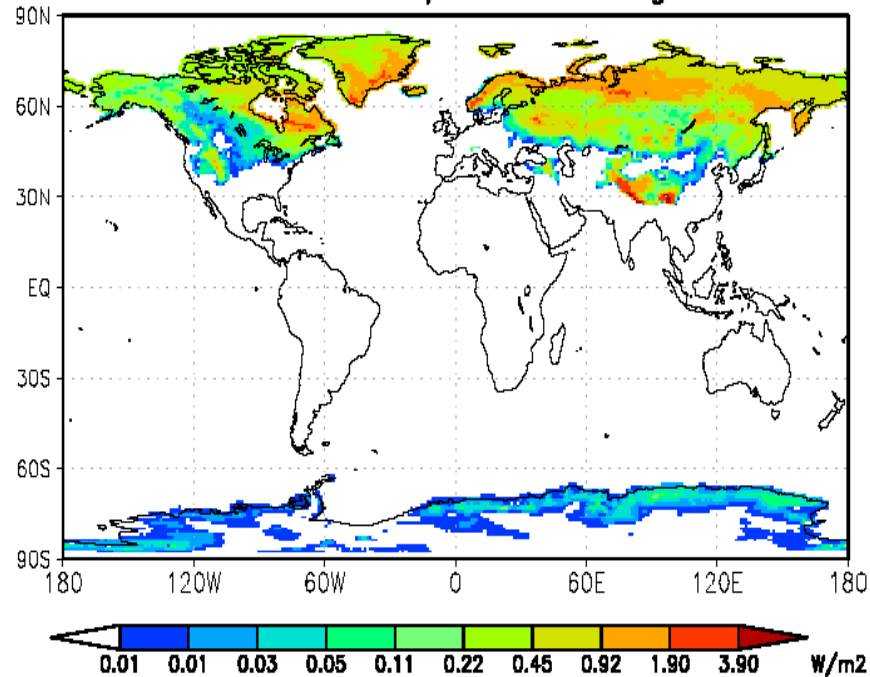

# Black carbon snow forcing in CCSM4

PD MAM BC/snow Forcing

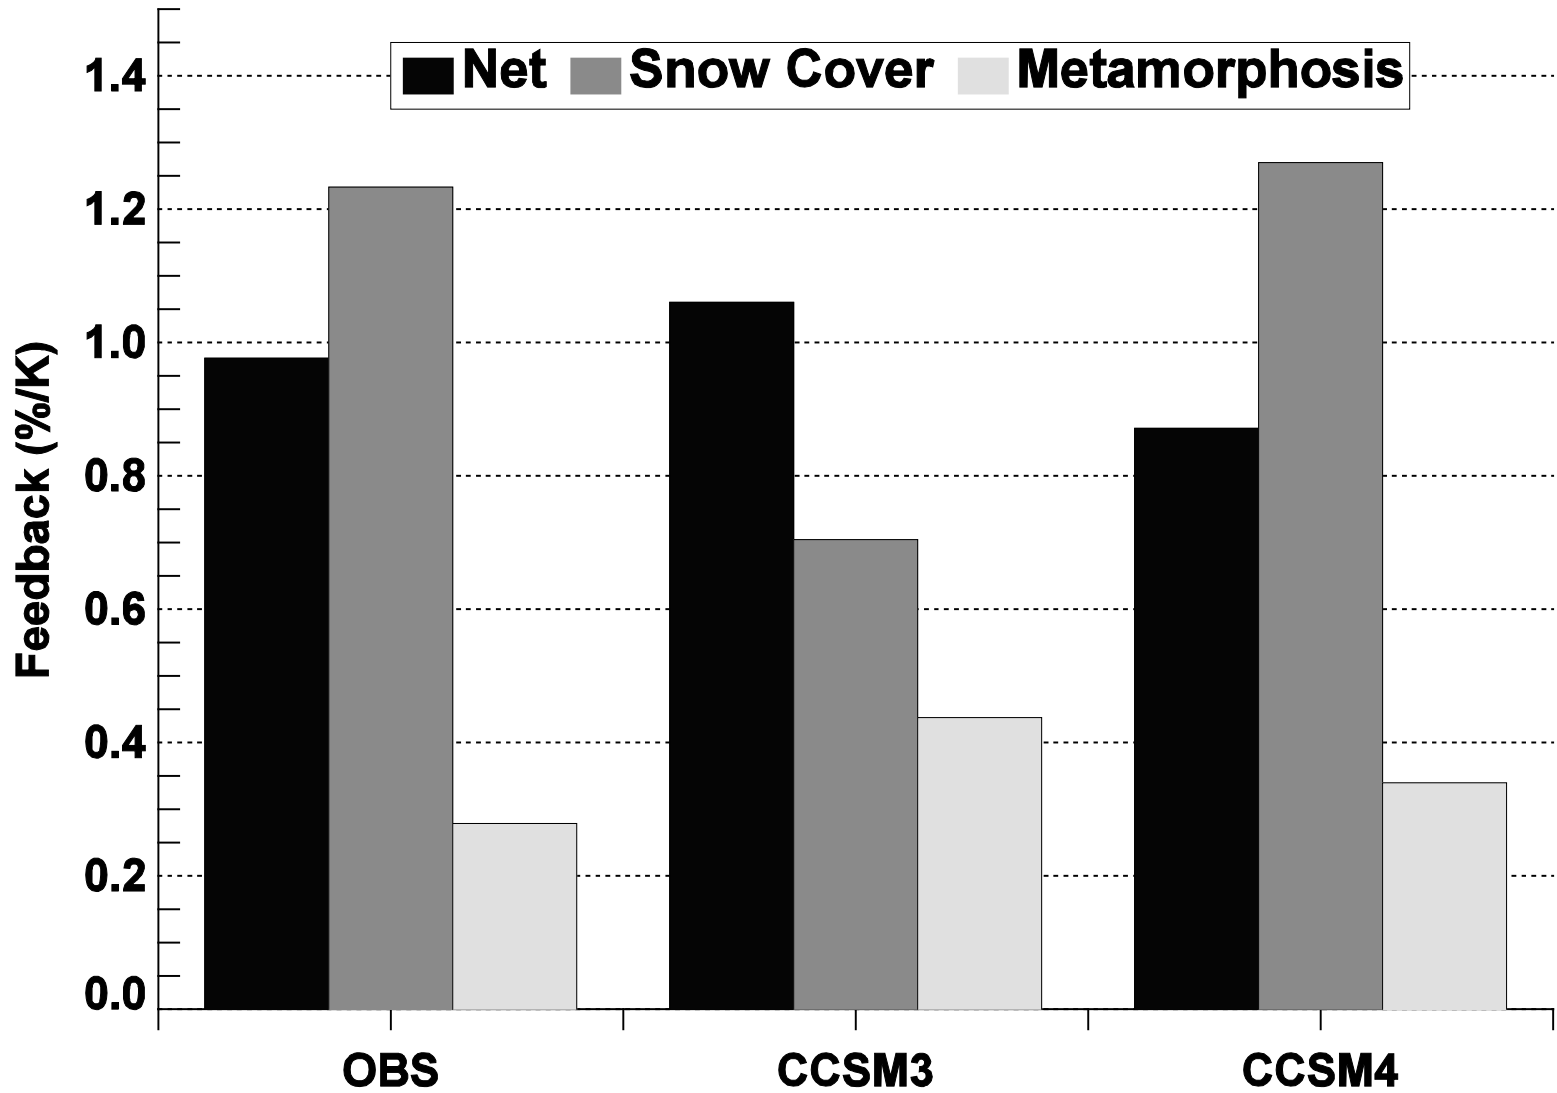

PI MAM BC/snow Forcing

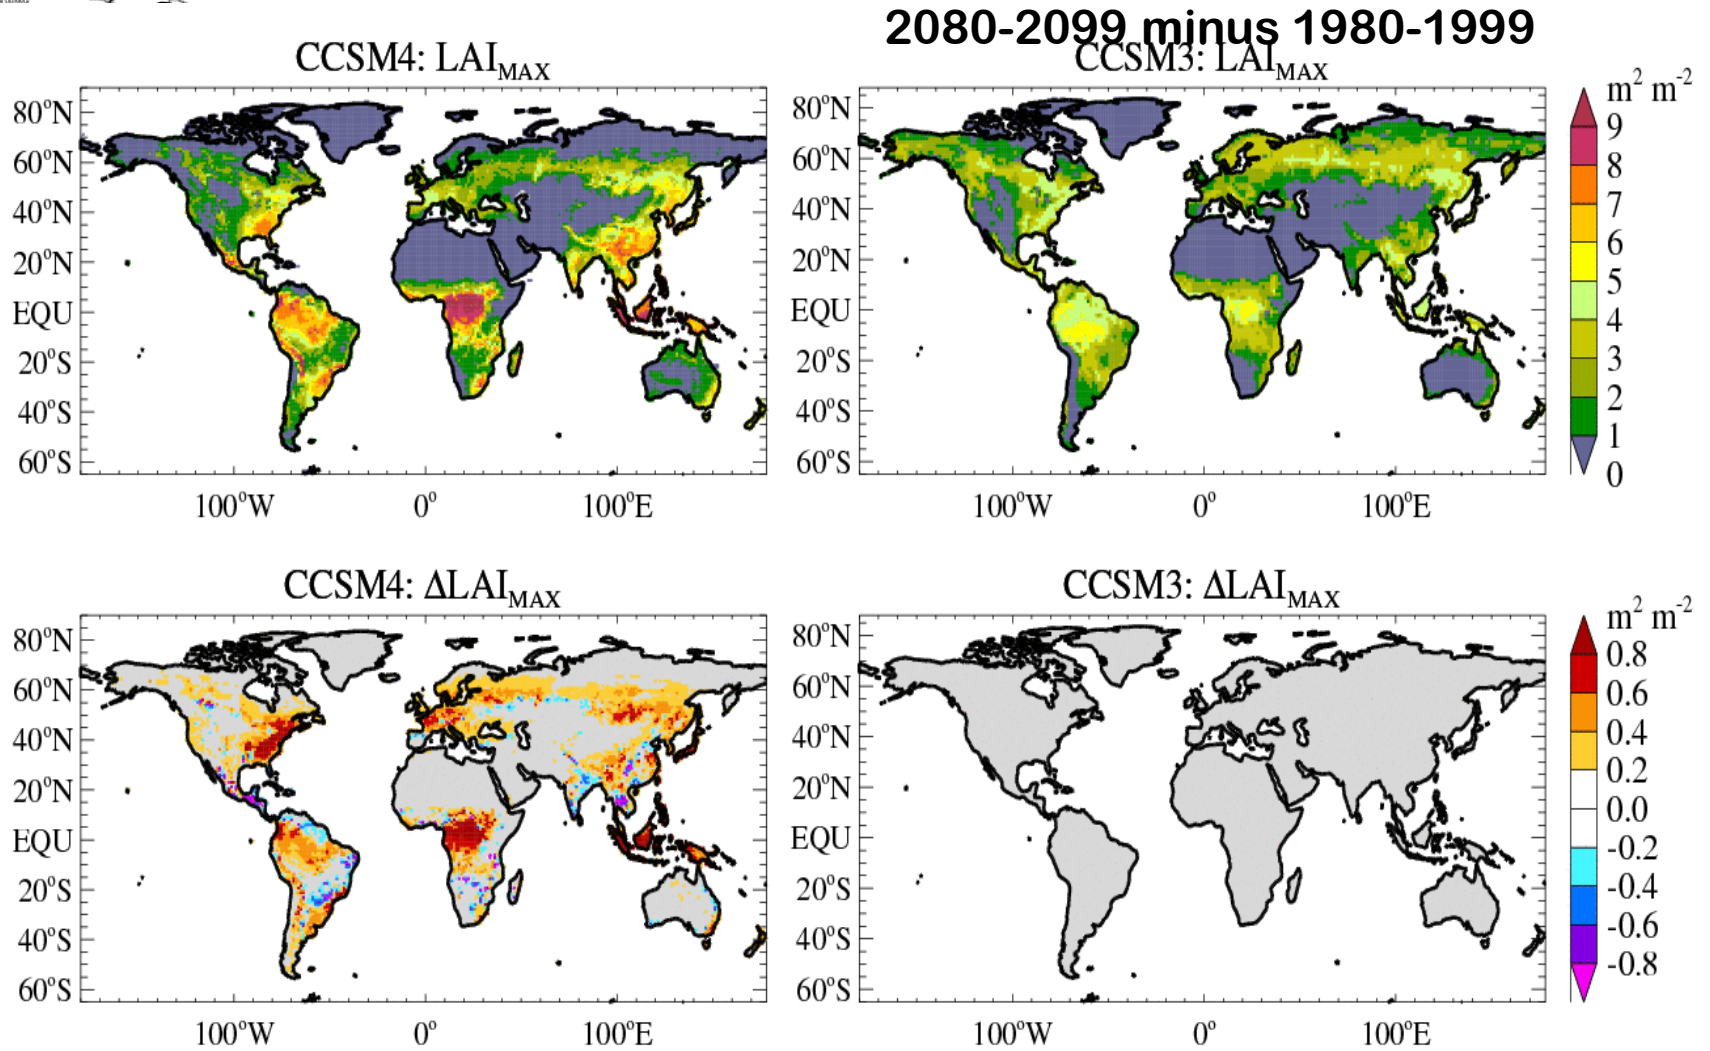

Species	Pre-Industrial (1850-1869) ( $W m^{-2}$ )	Present (1986-2005) ( $W m^{-2}$ )
Black carbon	0.023	0.037
Mineral dust	0.046	0.036
Combined effect	0.075	0.083

# Snow albedo feedback

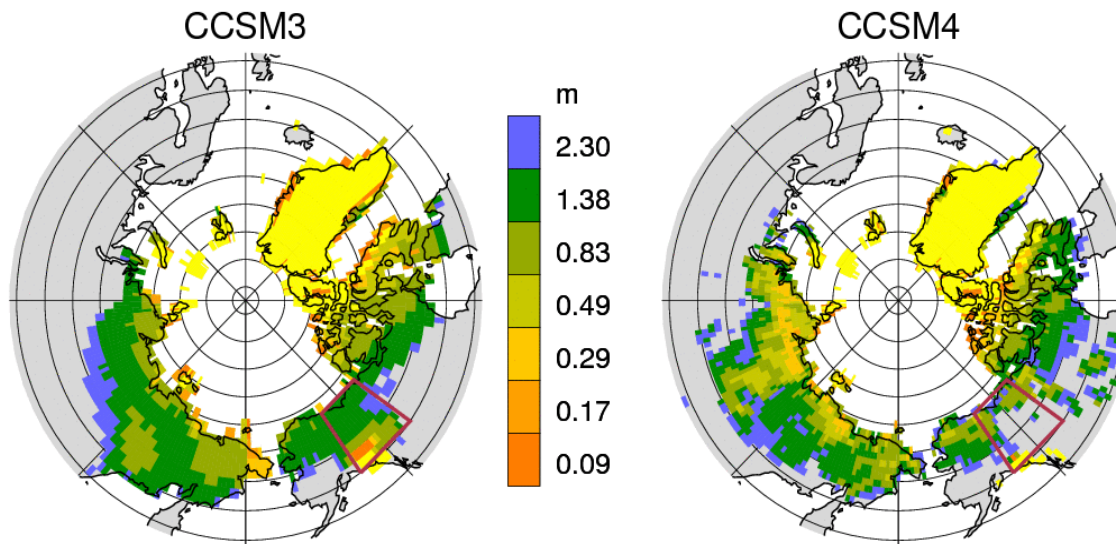

# LAI and LAI change (2080-2099 minuse 1980-1999) in CCSM4

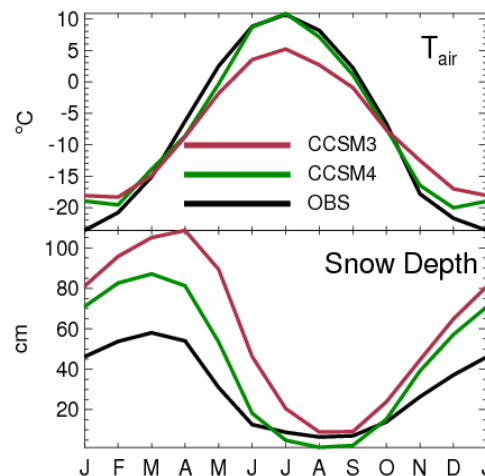

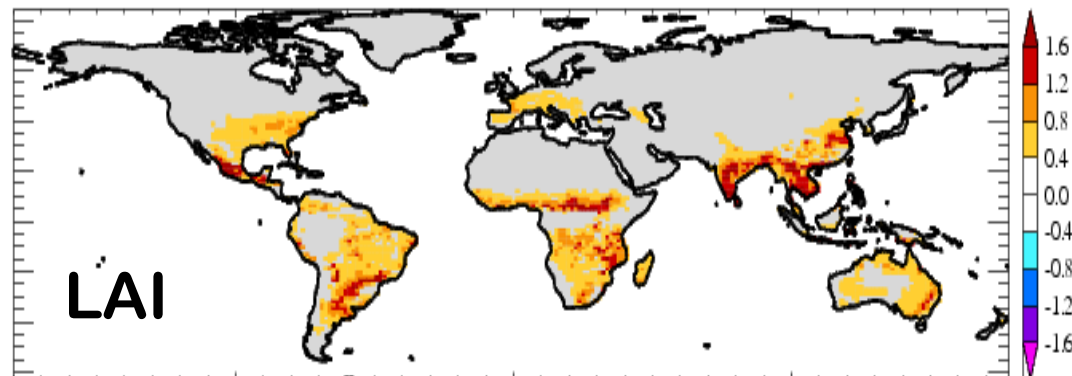

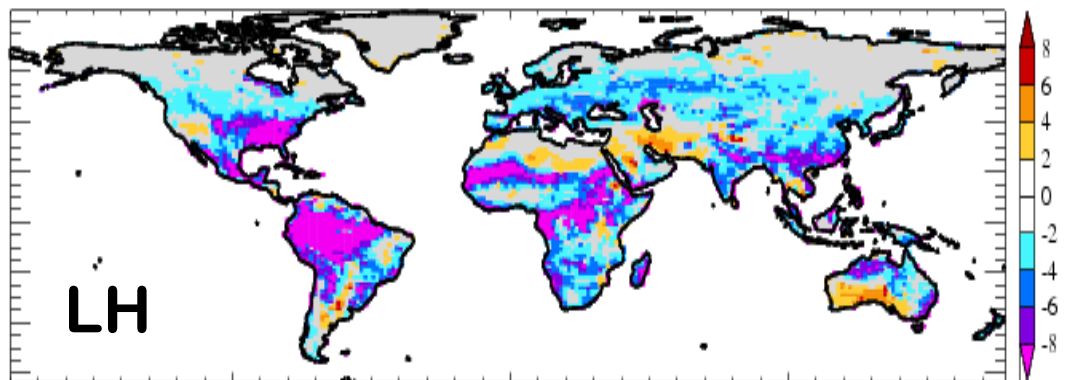

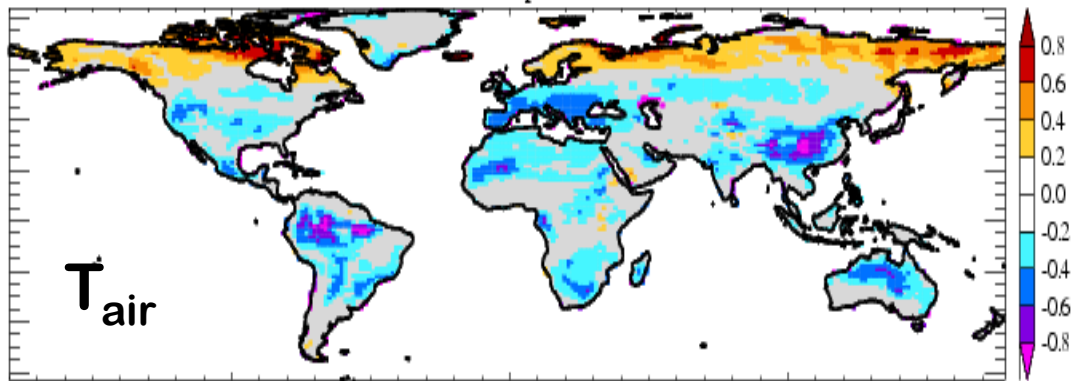

# Permafrost extent and active layer thickness

IPA Observed Extent

# CCSM4 – CCSM3 (St. Dev.)

Despite increase in LAI variability (by definition) lower variability in LH and  $T_{air}$  due to wetter model

Planning supplementary 1850 control and 20<sup>th</sup> century simulation with prescribed MODIS LAI

# CESM1 update: to be released on May 15, 2011

## – CAM5.1

- Bug fixes, model version used for CESM1 (CAM5) simulations for CMIP5

## – CLM4

- Crops (spring wheat, corn, soybean)
- Irrigation
- Support for Flux Tower Site simulations (PTCLIM)
- PFT physiology and RTM directional file converted to netCDF
- Parallel I/O

## – GLC (Greenland ice sheet) Compsets

## – POP, CICE ???

# CLM4.x (potential release with CESM update June, 2012)

# CLM4.x (potential release with CESM update June, 2012)

## – Crops and irrigation

- Connect crops and irrigation
- Fertilization and other updates, expand crop PFTs

## – Revised cold region hydrology

- Impedance factor, perched water table
- Surface water store (prognostic wetlands)
- New snow cover fraction param; separate surface energy calc for snow covered, surface water, and bare ground surfaces
- 2-way grid cell – RTM interactions (flooding)

## – Canopy physiology

- Update GPP (Bonan et al. 2011); multilayer canopy radiation and photosynthesis, leaf optimization

# CLM4.x (potential release with CESM update June, 2012)

- Improved fire algorithm including human triggers and suppression
  - Kloster et al., *Biogeosciences*, 2010
- Methane emissions model
  - Based on Riley et al. 2011; with options from Meng et al. 2011 (?)
- Revised lake model
  - New lake physics and lake area dataset
- Dynamic landunits
  - Land unit transitions: e.g., glacier to vegetated, vegetated to crop, vegetated to urban, etc.

# CLM4.x (potential release with CESM update June, 2012)

## – Software engineering

- High resolution: new input datasets (?); update tools mksrfdat, interpinic
- Simplified soil C and N pools coding structure
- Move CN (and other) model parameters to input file
- Model output: by default PFT/column – level output
- Unstructured grid

# CLM and Unstructured Grids

- Capability introduced to run with non lat/lon or logically rectangular grids
  - Leverage new ESMF parallel offline regridding capability for this work
  - *New* surface dataset generation tool for non lat/lon grids (faster)
  - *New* CLM code support to deal with non lat/lon surface datasets and generate appropriate history files
  - *New* offline post-processing utility to map non lat/lon history files to 2d for visualization
- New ways to run CLM
  - Regionally refined grids (e.g. over USA)
  - CAM/HOMME cubed sphere grid with and without regional refinement
  - “Collection” of tower sites in parallel
  - Catchment grid

# Other CLM development activities

- Soil carbon and nitrogen biogeochemistry
- Ecosystem demography, temporal response to disturbance
- Sub-surface hydrological processes
- Sub-grid soil moisture and snow heterogeneity
- 3-D canopy radiation
- Integrated Assessment Modeling
- Water (and carbon?) Isotopes
- N<sub>2</sub>O emissions
- Phenology
- Phosphorous
- Data assimilation
- Riverine transport of nutrients and sediments

# CESM Tutorial: August 1-5, 2011

## NCAR, Boulder, CO

---

- Lectures on simulating the climate system
- Practical sessions on running CESM, modifying components, and analyzing data
- Targeted at graduate student level
  - Max 80 students with financial support for up to 40 students
  - Acceptance criteria:
    - Preference given to early career graduate students, though we will aim for a mix of graduate students, postdocs, and early career research scientists and faculty
    - Project descriptions and their fit with broader CESM goals and activities
    - Balance attendees across institutions
- How to Apply:
  - Application website online at [www.cesm.ucar.edu](http://www.cesm.ucar.edu) in early January, 2011
  - Application deadline: **March 25, 2011**
  - Accepted students informed by late April
  - Questions should be directed to Dave Lawrence ([dlawren@ucar.edu](mailto:dlawren@ucar.edu))

# WCRP OPEN SCIENCE CONFERENCE

## CLIMATE RESEARCH IN SERVICE TO SOCIETY

Session C10: Land, Water and Climate  
(*conveners: D. Lawrence, P. Kabat*)  
Abstract deadline April 30, 2011

24–28 October 2011, Denver, Colorado, USA
