

RECLAMATION

Managing Water in the West

Climate Projections for Water Resources and Environmental Planning

Levi Brekke, Reclamation

CESM Societal Dimensions Working
Group Meeting, 19-20 February 2013,
NCAR Mesa Lab, Boulder, CO

Acknowledgments:

Presentation reflects thoughts and
contributions from Martyn Clark
(NCAR) and Jeffrey Arnold (U.S.
Army Corps of Engineers)

U.S. Department of the Interior
Bureau of Reclamation

Bottom Line Up Front

- The water management community has developed capabilities to use climate projections in long-term planning assessments.
- Through CCAWWG , Reclamation is collaborating with Federal water science and management partners to understand limits of these capabilities, define community needs, and identify research opportunities.
- CESM presents several unique research opportunities...

Early Activity: improve access to “many” downscaled climate (2007-present) and hydrology projections (2011-present)

http://gdo-dcp.ucllnl.org/downscaled_cmip3_projections/

• CMIP3

– Climate, monthly (BCSD)

- 16 GCMs
- 3 emissions
- 112 projections
- 1950-2099, NLDAS, 1/8°

– Climate, daily (BCCA)

- 9 GCMs
- 3 emissions
- 57 projections
- {1961-2000, 2046-2065, 2081-2100}, NLDAS, 1/8°

– Hydrology (extend from BCSD)

- same attributes
- only western U.S. coverage
- Serve (a) monthly water balance variables, and (b) daily forcings and gridded runoff

Bias Corrected and Downscaled WCRP CMIP3 Climate and Hydrology Projections

Summary

This archive contains fine spatial-resolution translations of:

- climate projections over the contiguous United States (U.S.) developed using two downscaling techniques (monthly BCSD Figure 1, and daily BCCA Figure 2) and
- hydrologic projections over the western U.S. (roughly the western U.S. Figure 3) corresponding to the monthly BCSD climate projections.

Archive content is based on global climate projections from the World Climate Research Programme's (WCRP's) Coupled Model Intercomparison Project phase 3 (CMIP3) multi-model dataset, which was referenced in the Intergovernmental Panel on Climate Change Fourth Assessment Report. Please see the "About" page for information on data development, including the methodology to perform climate model bias-correction and spatial downscaling.

Purpose

The archive is meant to provide planning analysts access to climate and hydrologic projections that are spatially downscaled to a "basin-relevant" resolution. Such access permits several types of analyses, including:

- assessment of local to regional climate projection uncertainty,
- assessment of climate change impacts on natural and social systems (e.g., watershed hydrology, ecosystems, water and energy demands),
- risk-based exploration of planning and policy responses framed by potential climate changes evident in these projections.

Archive History

November 2007: Archive additions include:

- 112 projections of monthly temperature and precipitation at 1/8° resolution over the contiguous U.S., developed using the "Bias-Correction Spatial Disaggregation" (BCSD) downscaling technique (see "About")

December 2010: Archive additions include:

- gridded meteorological observations (see "About") used to guide the BCSD application, and
- the intermediate datasets developed during BCSD application (i.e., 2d regridded global climate projections over the contiguous U.S. (2d Raw) and bias-corrected versions of these projections (2d BC))

August 2011: Archive additions include:

- 53 projections of daily minimum temperature, maximum temperature and precipitation

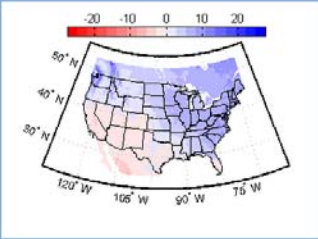

Figure 1: BCSD CMIP3 Monthly Climate Analysis example - Median projected change in average-annual precipitation (cm/year), 2041-70 versus 1971-2000.

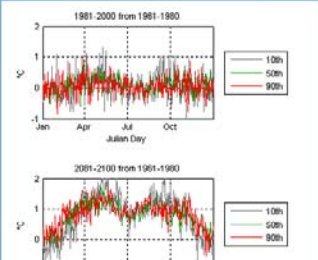

Figure 2: BCCA CMIP3 Daily Climate Analysis example - Calendar-day, ensemble-mean change in 20-year diurnal temperature range for three percentiles of diurnal range: 10th, 50th and 90th for the period pairs shown.

RECLAMATION

Early Applications

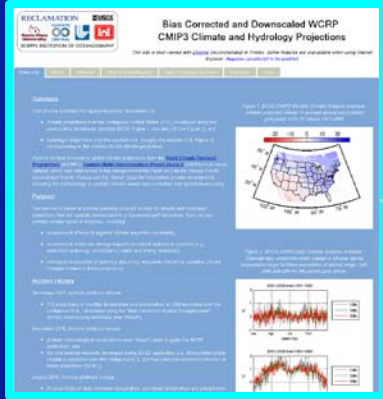

(leveraging the **previous “archive”** as well as other downscaled information sources)

- Internal activity
 - Reclamation 2008 (ESA Biological Assessment, CA Central Valley Project)
 - Reclamation 2009 (NEPA EIS, CA San Joaquin River Restoration Program)
 - RMJOC 2010 (Columbia Basin; BPA, USACE, and Reclamation development of future climate & hydrology change scenarios)
 - Others...
- External Activity (tracked)
 - CO Front Range Climate Change Vulnerability Study (2008-2012)
 - Colorado River Water Availability Study (same)
 - California Climate Action Team studies (2006, 2009)
 - NOAA RISA assessments (CIG, WWA)
 - Others...

Recent Application: West-Wide Hydrology Projection & SECURE 9503 report (2011)

112 BSCD CMIP3 Climate Projections...

http://gdo-dcp.ucllnl.org/downscaled_cmip3_projections/dcpInterface.html

...112 Hydrologic Projections covering western U.S....

8 "big basin" VIC hydrology model-apps from Univ. of WA...

Data-service, Reclamation and broader public use

SECURE Report to Congress, 2011 focus on median changes; future reports have broader scope

Analyses of Period-changes in climate and hydrology

RECLAMATION

Downscaled CMIP5 Climate and Hydrology Projections (climate exp. ~Mar 2013)

http://gdo-dcp.ucllnl.org/downscaled_cmip3_projections/

• CMIP5

– Climate, monthly (BCSD)

- 37 GCMs
- 4 emissions
- 234 projections
- 1950-2099, NLDAS, 1/8°

– Climate, daily (BCCA)

- 21 GCMs
- 4 emissions
- 134 projections
- 1950-2099, NLDAS, 1/8°

– Hydrology (extend from BCSD)

- same attributes, although driven by projected changes in diurnal temperature range and average temperature, not just the latter (as in prior effort)
- CONUS + Canadian portions of Columbia and Missouri River Basins
- Serve (a) monthly water balance variables, and (b) daily forcings and gridded runoff

Bias Corrected and Downscaled WCRP CMIP3 Climate and Hydrology Projections

RECLAMATION

Role of Climate Information in Water Resource Management Studies

Eight Technical Steps for incorporating climate change into **Water Resource Management Studies**

1. Summarize Literature on Climate Change and Water Resources

2. Obtain Climate Projections Data

3. Decide which Projections to use and how to use in Planning Scenarios

4. Assess Natural Systems Response

5. Assess Social Systems Response

6. Evaluate Study Questions (regarding Resource Management Objectives)

7. Assess and Characterize Uncertainties

8. Communicate Uncertainties and relate to Decision-Making

Prioritization of Research relative to Technical Step (Gap Category)

Technical Step	Technical Step (Gap Category)	Average Priority Rankings ¹	
		Reclamation/ USACE	All Respondents
1	Summarize Relevant Literature	1.5	1.5
2	Obtaining Climate Change Information	2.5	2.4
3	Make Decisions About How To Use the Climate Change Information	3.0	2.7
4	Assess Natural Systems Response	3.0	1.9
5	Assess Socioeconomic and Institutional Response	2.5	2.3
6	Assess System Risks and Evaluate Alternatives	1.5	2.0
7	Assess and Characterize Uncertainties	2.0	2.6
8	Communicating Results and Uncertainties to Decisionmakers	3.0	3.0

¹ Averaged across gaps in a given Step
(1 = low, 2 = medium, and 3 = high)

RECLAMATION

Summary of Gaps and Priorities (Steps 2 through 4 highlighted...)

Technical Planning Steps and Associated Gaps in Tools and Information	Priority Ranking ¹	
	Reclamation/ USACE	All Respondents
Step 2 – Obtaining Climate Change Information		
2.01 Improved skill in simulating long-term global to regional climate.	High	High
2.02 Downscaled data at finer space and time resolution	High	High
2.03 downscaled data and the down-scaling methodologies used to develop these data (including both statistical and dynamical climate models)	High	High

2010 BCCA, 2011 WWCRA VIC-hydrology projections

2011-2013 NCAR Project #1 (Sensitivity of Impacts to Downscaling/Hydrology Methods)

¹ Color shading indicates priority rating on research to address gaps: low (yellow), medium (light orange), and high (dark orange).

Summary of Gaps and Priorities (Steps 2 through 4 highlighted...)

Technical Planning Steps and Associated Gaps in Tools and Information	Priority Ranking ¹	
	Reclamation/ USACE	All Respondents
Step 2 – Obtaining Climate Change Information		
2.04 Indication of conditions of where and when the static and dynamic conditions of the system will hold under various climate change scenarios. <i>2011-2013 NCAR Project #1 (Sensitivity of Impacts to Downscaling/Hydrology Methods); NOAA NCPP (Dixon/Hayhoe)</i>	Medium	Medium
2.05 Synthesis of coastal project information and guidance on consistent use in planning for all Reclamation and USACE coastal areas.	Low	Low

¹ Color shading indicates priority rating on research to address gaps: low (yellow), medium (light orange), and high (dark orange).

Summary of Gaps and Priorities (Steps 2 through 4 highlighted...)

Technical Planning Steps and Associated Gaps in Tools and Information	Priority Ranking ¹	
	Reclamation/ USACE	All Respondents
Step 3 – Make Decisions About How To Use the Climate Change Information		
3.01 Understanding on observed climate variability from daily to multidecadal time scales, which underpins interpretation of future variability in climate projections and its relation to planning assumptions.	High	High
3.02 Understanding how to interpret future variability in climate projections and relevance to operating constraints on shorter- to longer-term time scales (from daily to multidecadal).	High	High
3.03 at all plan 2006-2007 USGS/CA-DWR/SCU project (Brekke et al. 2008); tracking literature (2008-present), lots of studies/frameworks based on CMIP3	Medium	Medium

¹ Color shading indicates priority rating on research to address gaps: low (yellow), medium (light orange), and high (dark orange).

Summary of Gaps and Priorities (Steps 2 through 4 highlighted...)

Technical Planning Steps and Associated Gaps in Tools and Information		Priority Ranking ¹	
		Reclamation/ USACE	All Respondents
Step 4 – Assess Natural Systems Response			
Watershed Hydrology (WH), Ecosystems (E), Land Cover (LC), Water Quality (WQ), Consumptive Use on Irrigated Lands (CU), and Sedimentation and River Hydraulics (SRH)			
4.01 water scop	2009-2011 Reclamation/USGS/NWS project on models' preferences; 2011-2013 NCAR Project #1; tracking literature	Low	Low
4.02 impa repre	(WH) Understanding how climate change should 2011-2013 NCAR Project #1; tracking literature	High	High
4.03 hydro prob	(WH) Method and basis for estimating extreme PACE Mahoney; 2012-2013 NOAA/CIRES project #1	High	High

¹ Color shading indicates priority rating on research to address gaps: low (yellow), medium (light orange), and high (dark orange).

Summary of Gaps and Priorities (Steps 2 through 4 highlighted...)

Technical Planning Steps and Associated Gaps in Tools and Information	Priority Ranking ¹	
	Reclamation/ USACE	All Respondents
Step 4 – Assess Natural Systems Response		
Watershed Hydrology (WH), Ecosystems (E), Land Cover (LC), Water Quality (WQ), Consumptive Use on Irrigated Lands (CU), and Sedimentation and River Hydraulics (SRH)		
4.04 (WH) Guidance on strengths and weaknesses of available versions of spatially distributed hydrologic weather data that may be used for both watershed hydrologic modeling. <i>2011-2012 Reclamation/NWS (Elsner); 2011-2013 NCAR Project #1</i>	Medium	Medium
4.05 (WH) Understanding how climate change should impact groundwater recharge and groundwater interaction with surface water supplies.	Medium	Medium
4.06 (E) Understanding how climate change should impact inland and coastal anadromous fisheries.	Medium	Low

¹ Color shading indicates priority rating on research to address gaps: low (yellow), medium (light orange), and high (dark orange).

CESM Opportunities

- Overarching question: How can SDWG scope CESM research to inform use of climate projections in long-term planning?
- Opportunities:
 1. Provide finer-resolution sneak preview
 2. Prep users for “hydroclimate” projections
 3. Foster offline use of CESM hydrology model

1) Finer-Res. Sneak Preview

- Goal: provide sneak preview on what GCMs may be able to produce in the coming years
- Approach:
 - conduct CESM experiments across multiple resolutions (“current” to “future” higher resolution); leverage MPAS initiative
 - complement with nested RCM simulations
- Questions:
 - How does finer resolution CESM simulation affect the regional to local climate change “story”?
 - How are simulated regional/local climate changes different when using hi-res CESM vs. coarser-res CESM w/ nested RCM? ... and with different RCMs?
 - How does CESM representations of hydrology differ from other land models?

2) “Hydroclimate” Projections

- Goal: prepare user community for future where GCMs produce meaningful local hydroclimate projections (*eliminating need for downscaling*)
- Approach:
 - educate users on hydrology schemes in GCMs
 - conduct experiments to understand GCM structure and resolution controls on simulated local hydroclimate
- Questions:
 - At what resolutions are GCMs’ projections of “local” hydroclimate meaningful? For which hydroclimate variables & statistics?
 - How are these findings sensitive to chosen land-surface hydrology scheme?

3) Offline Use of CESM LSM

- Goals: enhance user feedback to the broader CESM land-surface modeling efforts; facilitate users' migration to applying more process-based hydrology models
- Approach:
 - educate users on CESM's land-surface hydrology scheme (LSM)
 - scope research explore how to maximize utility of CESM LSM for water management applications:
 1. improve input datasets and associated estimates of uncertainty
 2. meld model application approaches found in "engineering hydrology" with those featured in the "land surface" modeling community
 3. include CESM LSM in multi-physics and process-diagnostic experiments designed to increase understanding on model application preferences
