

Year in Review: Land Ice-Relevant Changes in CESM Since Last Winter

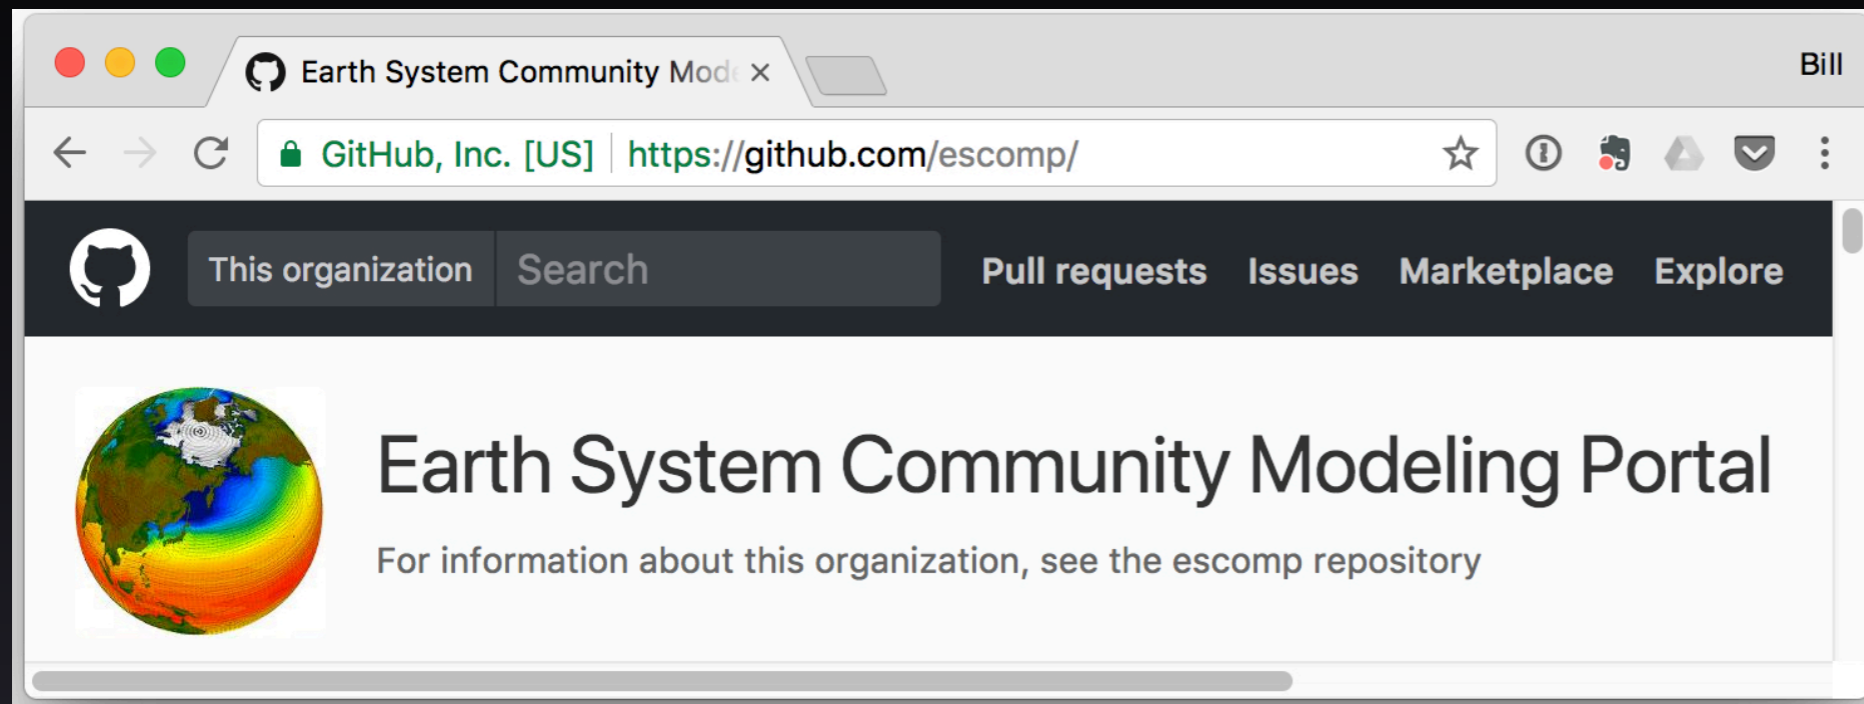

Bill Sacks

Land Ice Working Group
Software Engineering Liaison

With contributions from many others in the LIWG
and the CESM Software Engineering Group (CSEG)

CESM Migration to GitHub

CESM Migration to GitHub

The image displays two overlapping browser windows from GitHub. The top window shows the organization page for 'Earth System Community Modeling Portal' (https://github.com/escomp/). The bottom window shows the repository page for 'ESCOMP/cism-wrapper' (https://github.com/escomp/cism-wrapper).

Organization Page (Top Window):

- URL: <https://github.com/escomp/>
- Organization Name: Earth System Community Modeling Portal
- Navigation: Pull requests, Issues, Marketplace, Explore

Repository Page (Bottom Window):

- URL: <https://github.com/escomp/cism-wrapper>
- Repository Name: ESCOMP / cism-wrapper
- Statistics: 3 Unwatch, 0 Star, 0 Fork
- Navigation: Code, Issues (6), Pull requests (0), Projects (0), Wiki, Insights, Settings
- Description: Community Ice Sheet Model wrapper for CESM <http://www.cesm.ucar.edu/models/cesm2...>
- Stats: 166 commits, 2 branches, 150 releases, 6 contributors
- Actions: Branch: master, New pull request, Create new file, Upload files, Find file, Clone or download
- Recent Activity: billsacks Merge branch 'add_manage externals_file' Latest commit 6305a39 13 days ago

CLM: Use MEC Even With SGLC

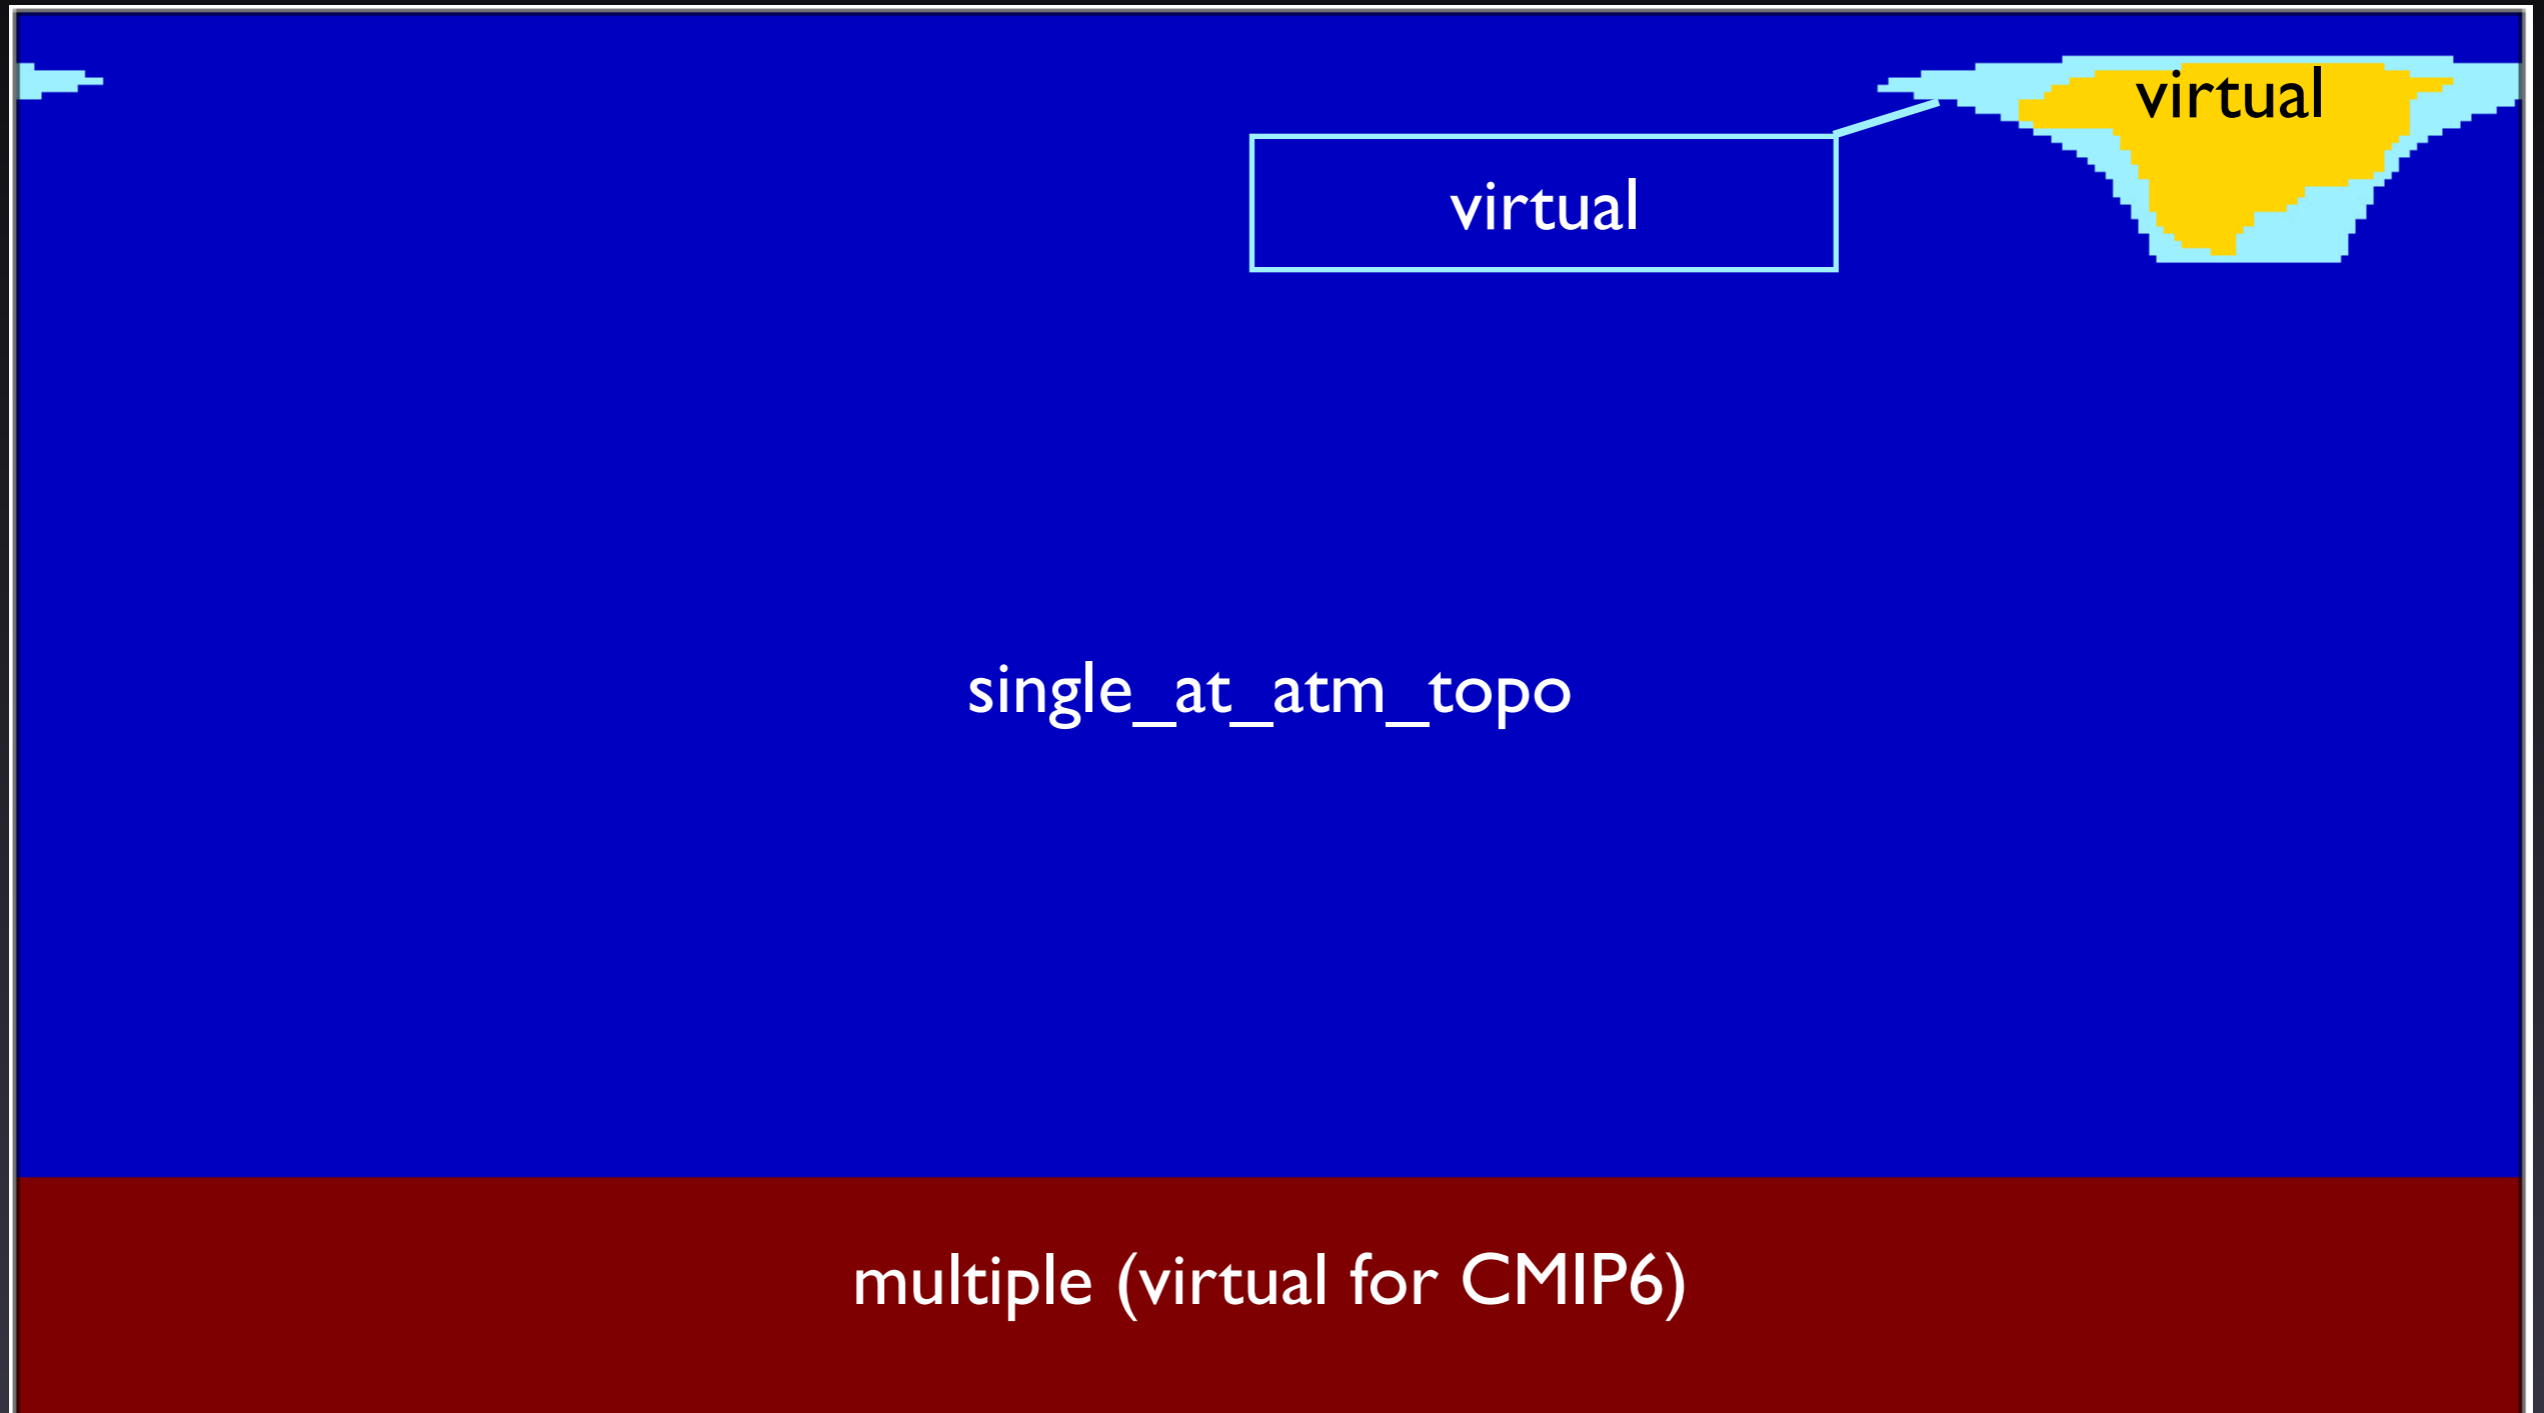

- Previously, CLM's logic for whether to use multiple elevation classes (MEC) was tied to whether CISM was running
- Now even runs with a stub glacier model (SGLC) use the MEC scheme
- Computes SMB in each elevation class, but no downscaling
- Applications:
 - ▶ Single-point / regional runs over glacier regions
 - ▶ Achieving consistent physics in runs that cannot or don't want to use CISM (e.g., runs with Gregorian calendar)

Remapping Changes

Bill Lipscomb, Mariana Vertenstein, Jeremy Fyke

Remapping Changes

Bill Lipscomb, Mariana Vertenstein, Jeremy Fyke

Other Changes

- Fixes to remapping of CISM's runoff – relevant for two-way-coupled runs
 - ▶ Fixed major bug in remapping of CISM's ice runoff to ocean: remapped runoff was too low by roughly a factor of 2-3
 - ▶ Tweaks to runoff mapping to work with POP's Estuary Box Model (EBM)
- New options to reset CLM's initial snow pack over glacier and/or non-glacier columns (Leo van Kampenhout)
 - ▶ Can be used when transitioning from offline spinup to coupled run
 - ▶ For glacier columns, can specify an elevation threshold
- Consistent atmospheric topography when running an I or JG compset with cplhist forcings (Mariana Vertenstein)

Some Software Priorities Over the Next Year

- Bring CISM2.1 into CESM
- Fix generation and use of TG forcings
 - ▶ Currently, TG compsets should only be used for software testing, not science
- Allow multiple ice sheets (Brian Kauffman)
- Improved handling of water and energy conservation with dynamic landunits
 - ▶ Avoiding large, fictitious fluxes
 - ▶ Support new SMB definition (inclusion of snow pack)
- Some coupling edge cases
 - ▶ e.g., CLM dictates more melt than CISM can accommodate
- Rework CISM's time manager (general cleanup, allow Gregorian calendar) (Gunter Leguy)
