Arctic and Antarctic Sea Ice State in CESM2 and the impact of clouds

PCWG Winter Working Group Meeting February 6, 2020

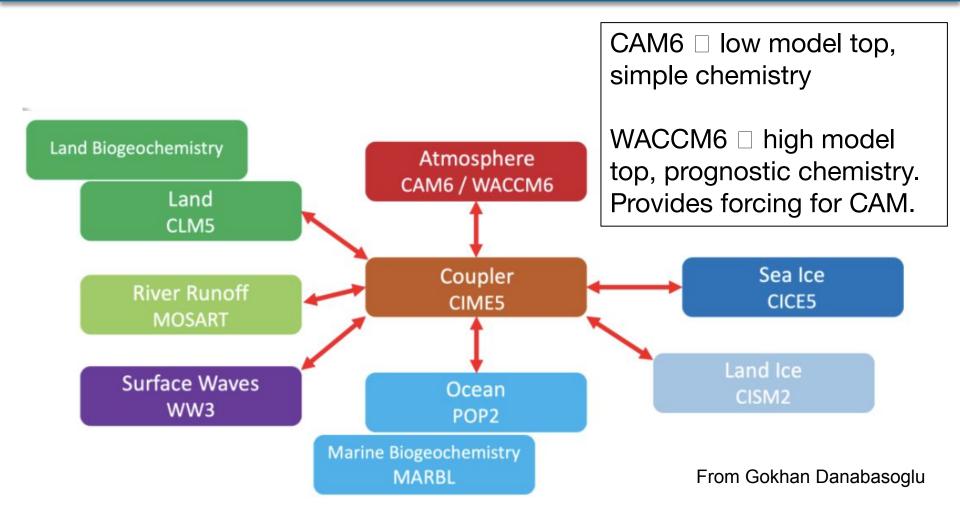

Alice DuVivier - <u>duvivier@ucar.edu</u> Marika M. Holland, Jennifer E. Kay, Simone Tilmes, Andrew Gettelman, David Bailey

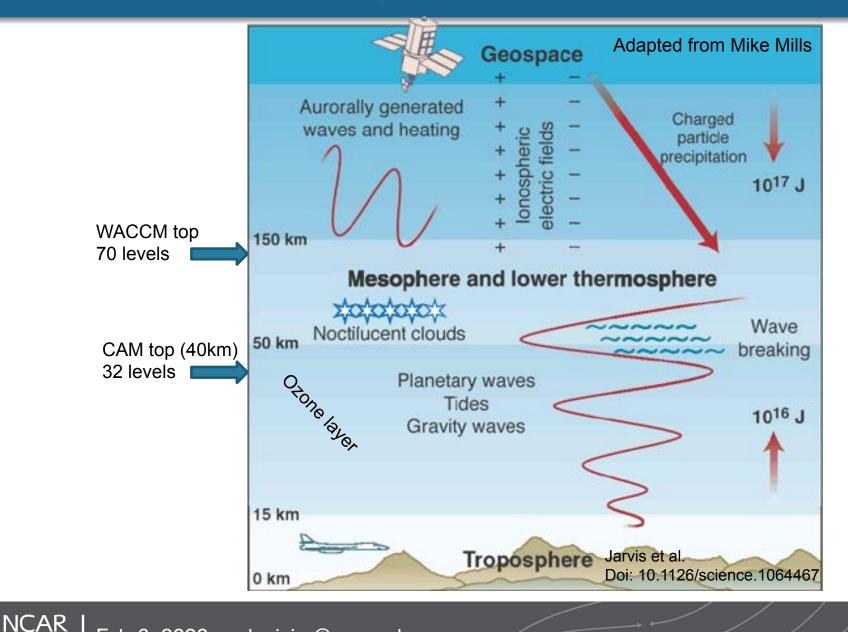

This material is based upon work supported by the National Center for Atmospheric Research, which is a major facility sponsored by the National Science Foundation under Cooperative Agreement No. 1852977

CESM2 configuration

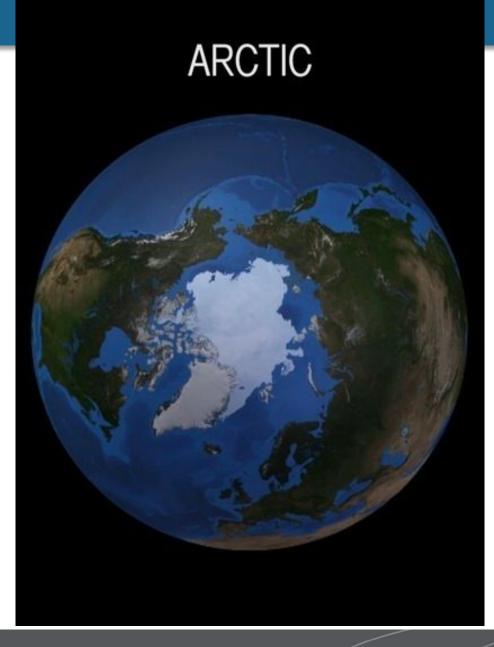

Atmospheric Structure

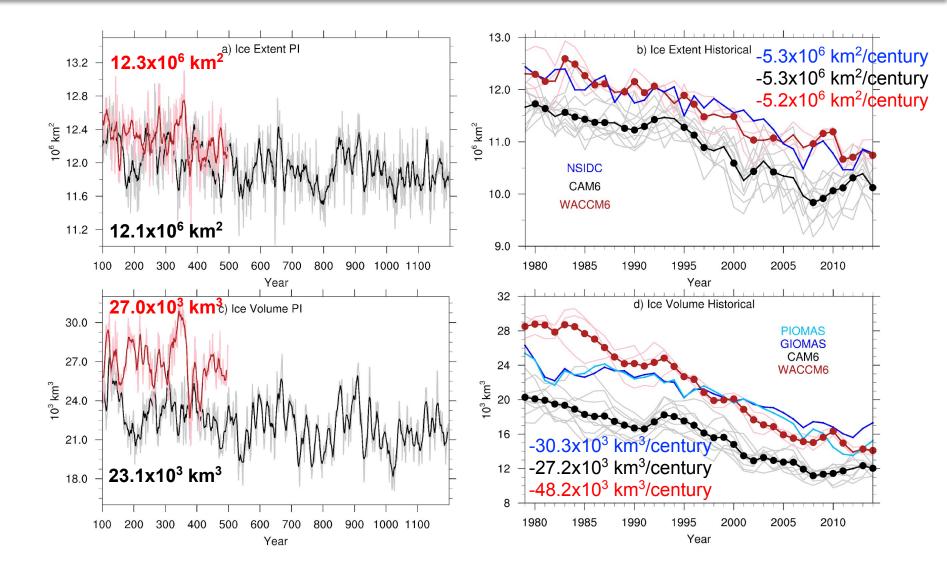

Feb.6, 2020 duvivier@ucar.edu

UCAR

NCAR | Feb.6, 2020 duvivier@ucar.edu

Arctic mean sea ice extent and volume differ

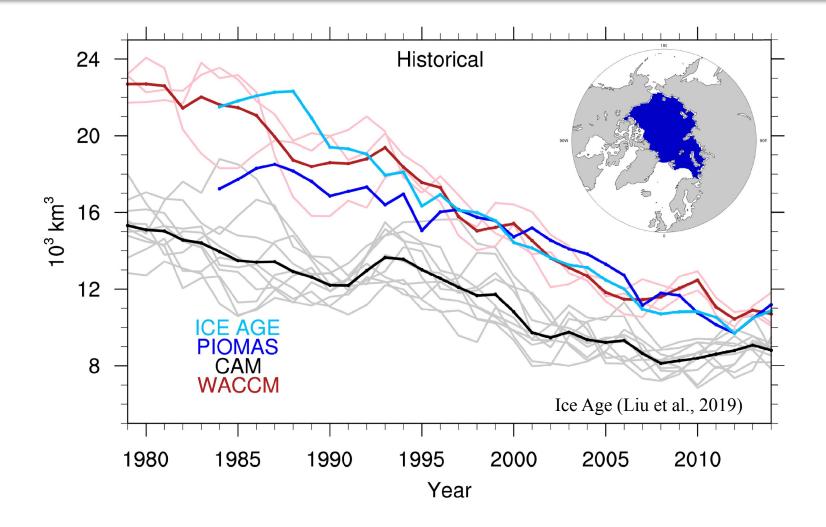

Feb.6, 2020 duvivier@ucar.edu

NCAR

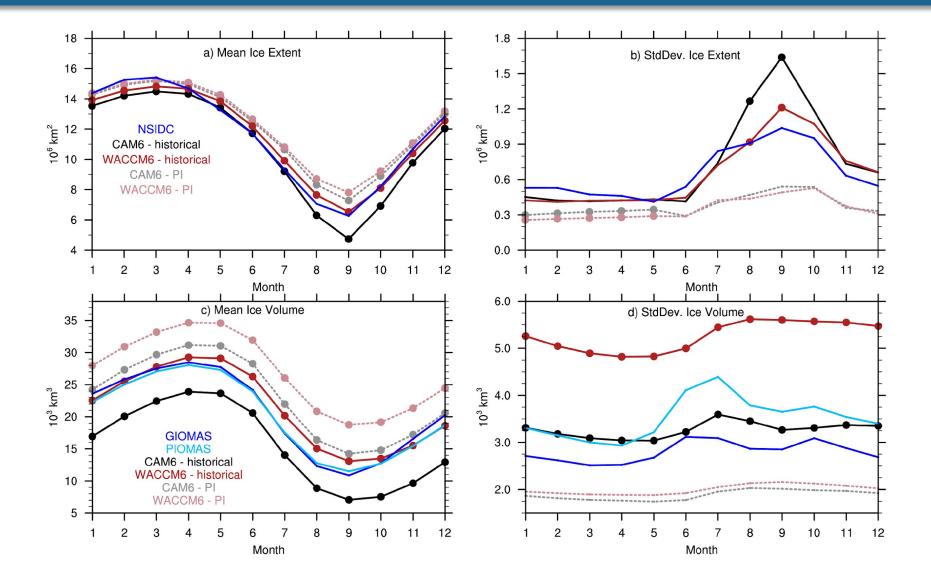

UCAR

Compared to new Ice Age derived volume, WACCM fits well

Arctic seasonal cycles

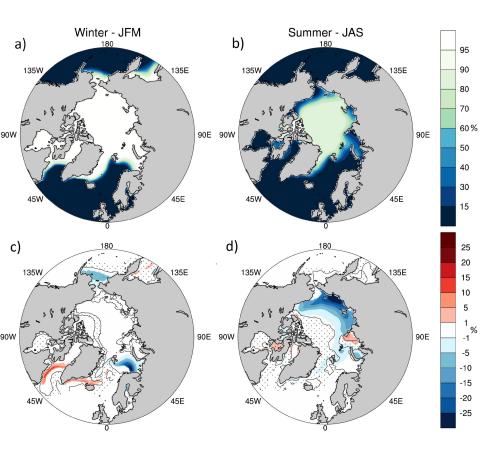

duvivier@ucar.edu

NCAR UCAR

Feb.6, 2020

Sea ice summer concentration differences are largest near Siberian Sea

Preindustrial (years 100-500)

NCAR

UCAR

Top: WACCM Bottom: CAM-WACCM

Feb.6, 2020 duvivier@ucar.edu

Sea ice summer concentration differences are largest near Siberian Sea

Historical (1979-2014) ensemble mean

Winter - JFM Summer - JAS Winter - JFM Summer - JAS a) b) b) 180 a) 180 95 95 90 90 135W 80 80 70 70 60 % 60% _{90W} 90E 90W 90E 90W 90E 90W 90E 50 50 40 40 30 30 45E 45E 45E 45V 15 15 d) c) d) c) 25 25 20 20 135V 135V 135W 135\ 15 15 10 10 5 ¹ % % 90E 90W 90W 90E 90W 90E 90W 90E -1 -1 -5 -5 -10 -10 -15 -15 -20 -20 45E . 45E 45E 45W 45E 45W -25 -25

Feb.6, 2020 duvivier@ucar.edu

Sea ice thickness differences across whole basin and persist year-round.

Top: WACCM Bottom: CAM-WACCM

Feb.6, 2020 duvivier@ucar.edu

NCAR

Feb.6, 2020 duvivier@ucar.edu

NCAR UCAR

Antarctic mean sea ice extent and volume are similar

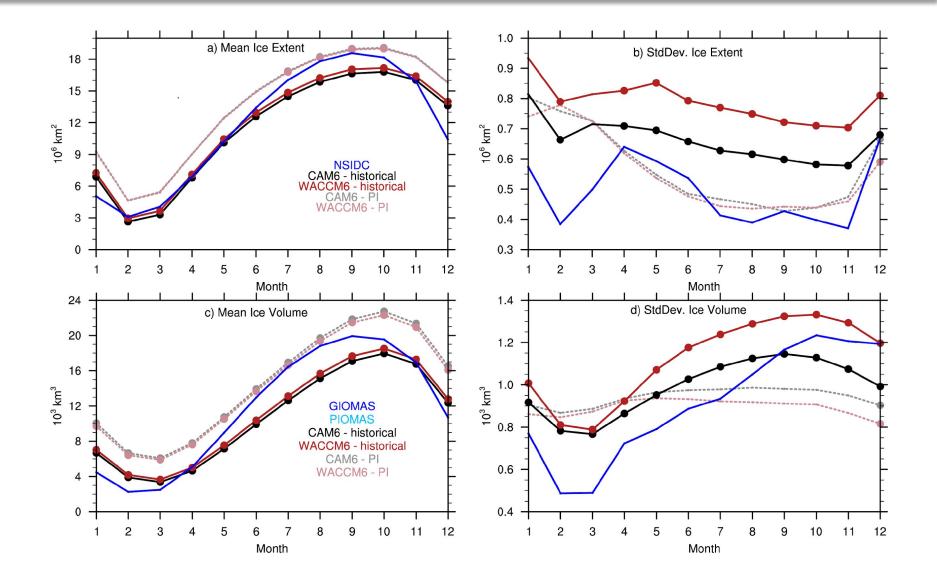

Dec. 9, 2019 duvivier@ucar.edu

NCAR

UCAR

Antarctic seasonal cycles are very similar

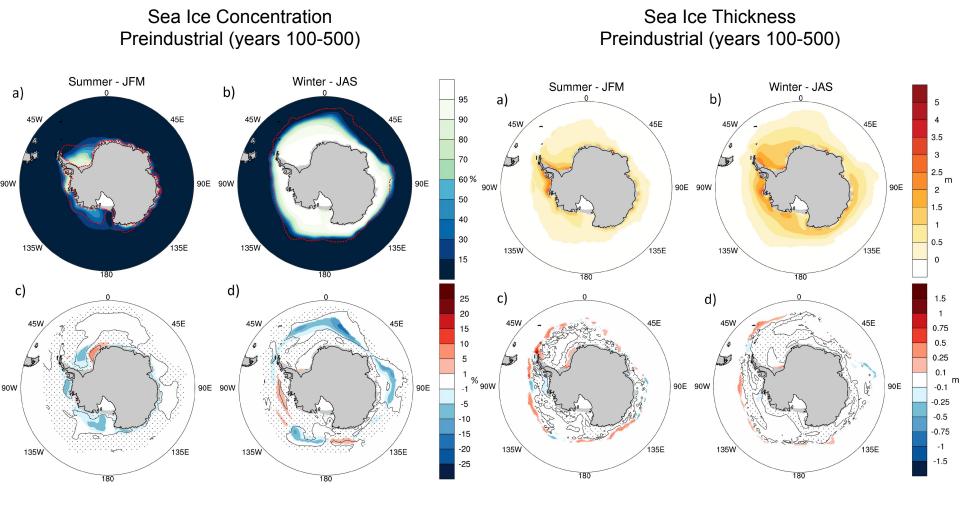

Dec. 9, 2019 duvivier@ucar.edu

NCAR

UCAR

Antarctic Spatial Differences

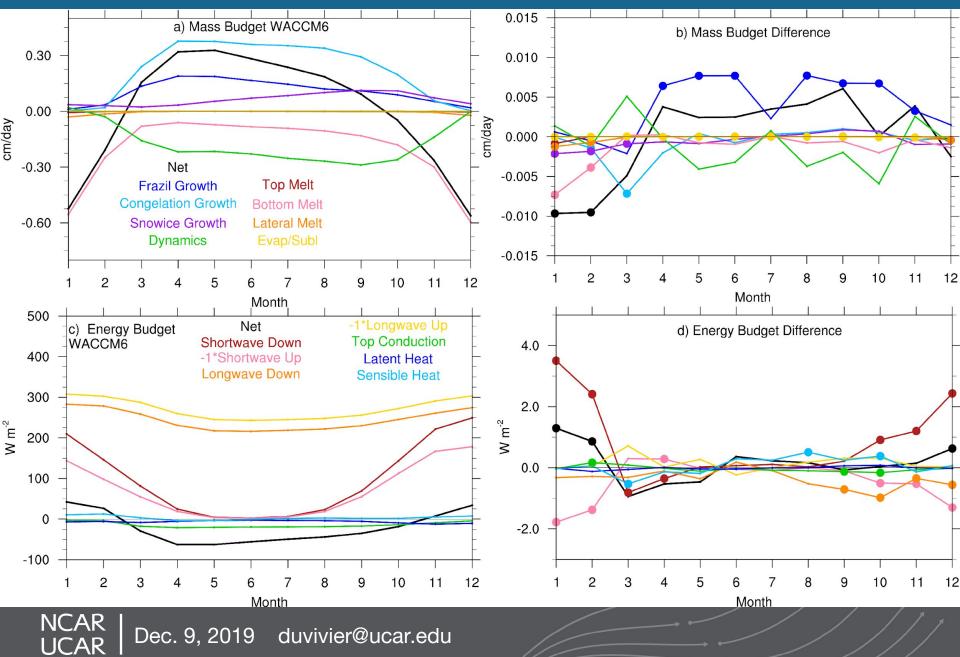

Top: WACCM Bottom: CAM-WACCM

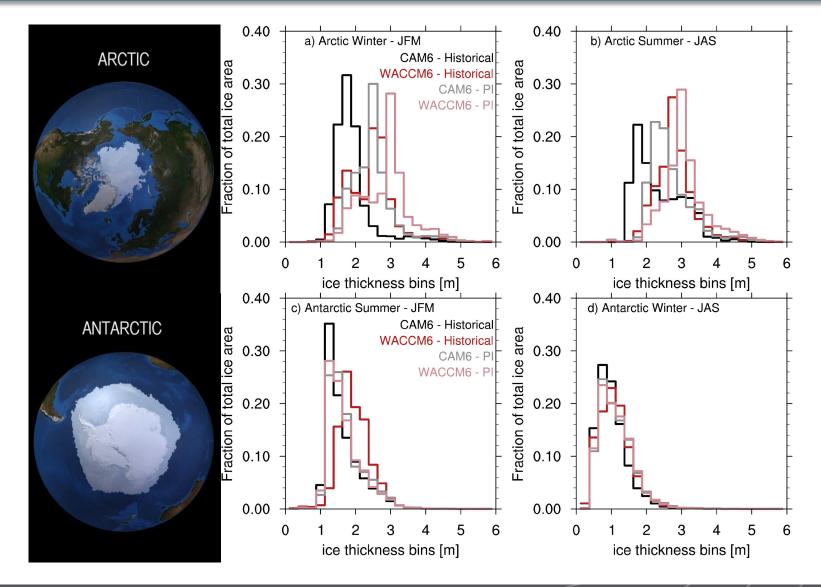

Dec. 9, 2019 duvivier@ucar.edu

NCAR

There are some differences in Antarctic mass and energy budget

Why is the Arctic sea ice thickness so different in CESM2 configurations while the Antarctic thickness is not?

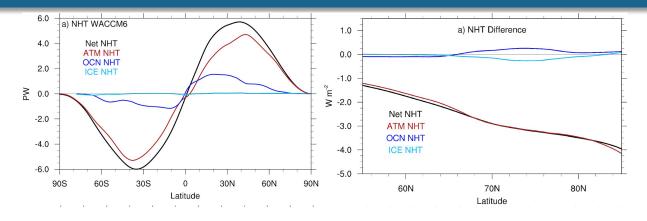

duvivier@ucar.edu

NCAR

UCAR

Feb.6, 2020

Northward Heat Transport is not significantly different

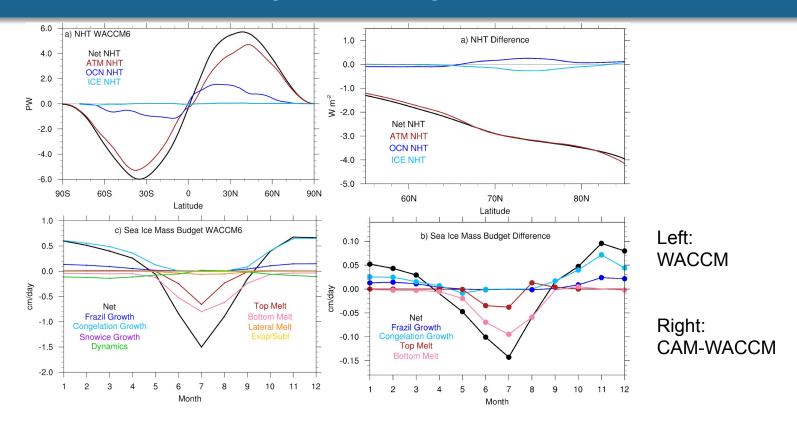

Left: WACCM

Right: CAM-WACCM

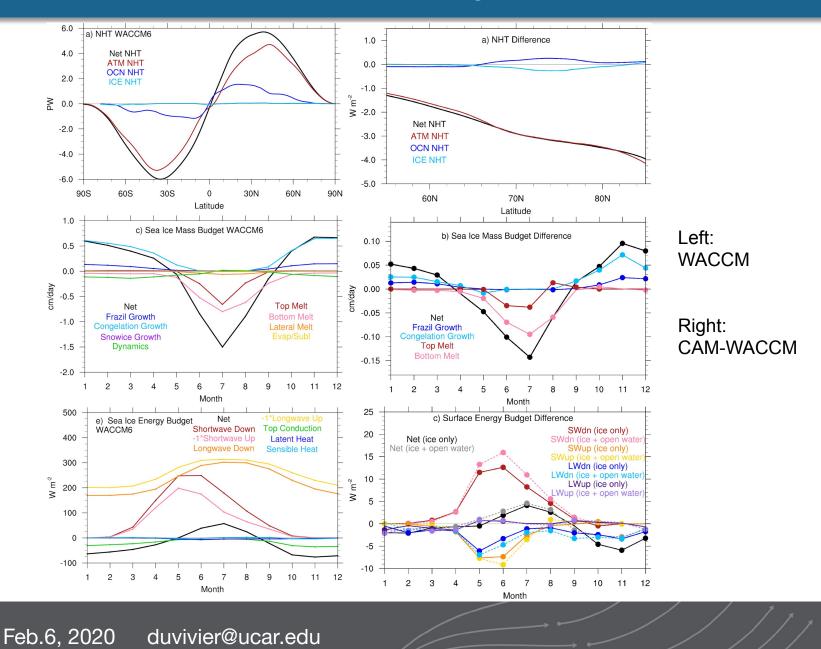

Ice Mass budget differs significantly

Month

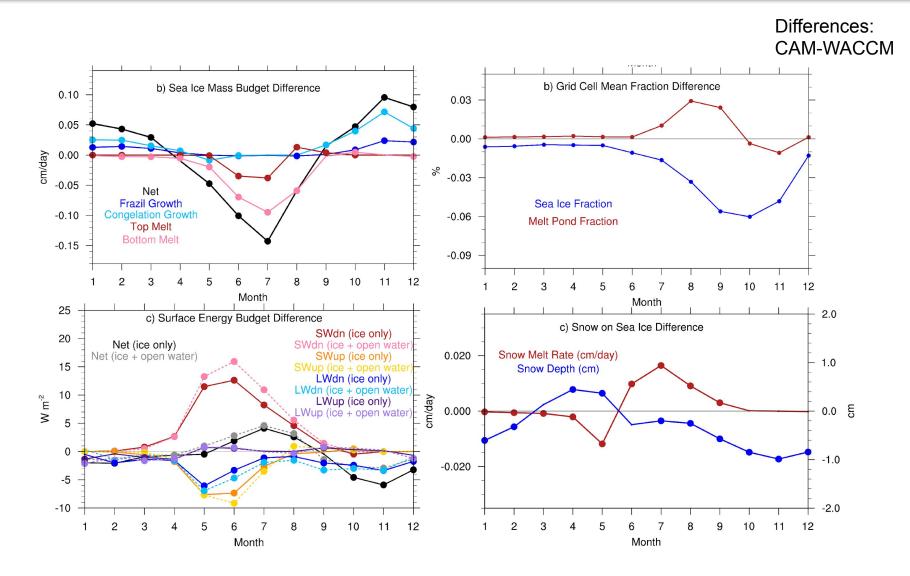

Shortwave radiation differs significantly

duvivier@ucar.edu

NCAR UCAR

Spring radiation differences to to surface snow melt, then differences in sea ice melt trigger albedo feedback.

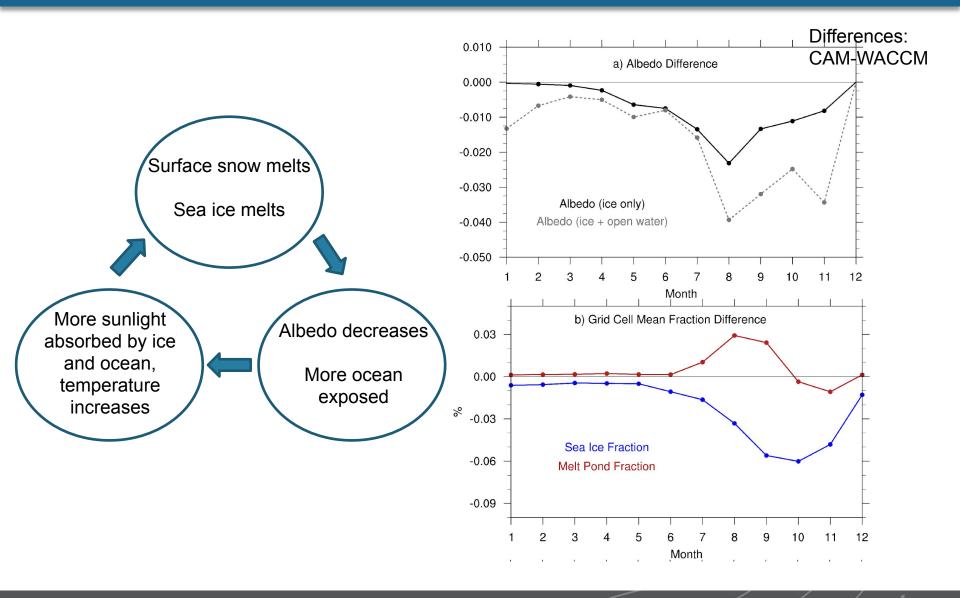

duvivier@ucar.edu

NCAR

Feb.6, 2020

The surface albedo feedback begins to diverge

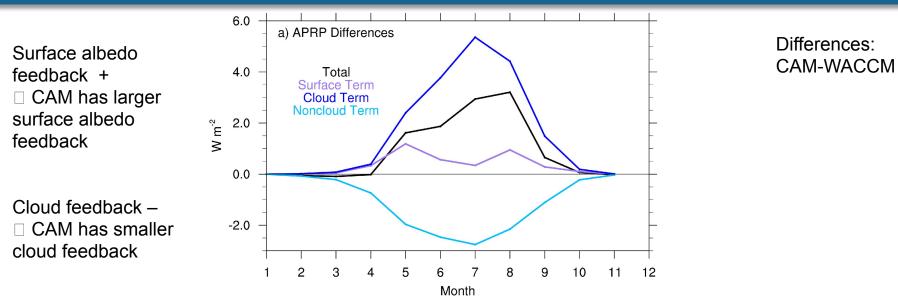

Feb.6, 2020 duvivier@ucar.edu

NCAR

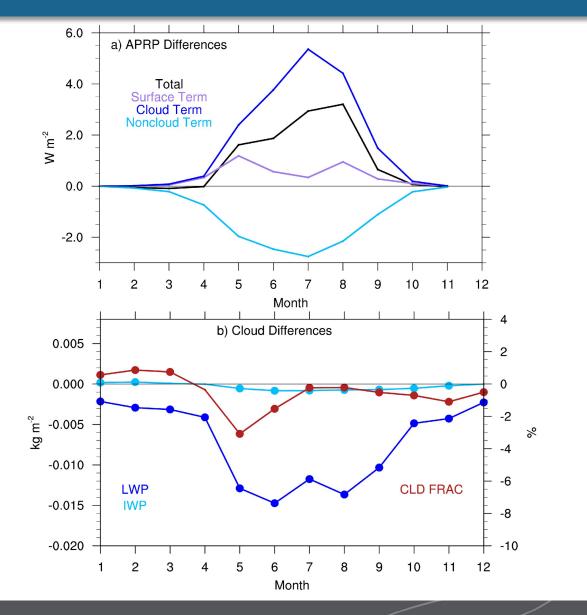

UCAR

The cloud differences are larger than the surface albedo differences

The liquid cloud differences are large in spring and summer

Differences: CAM-WACCM

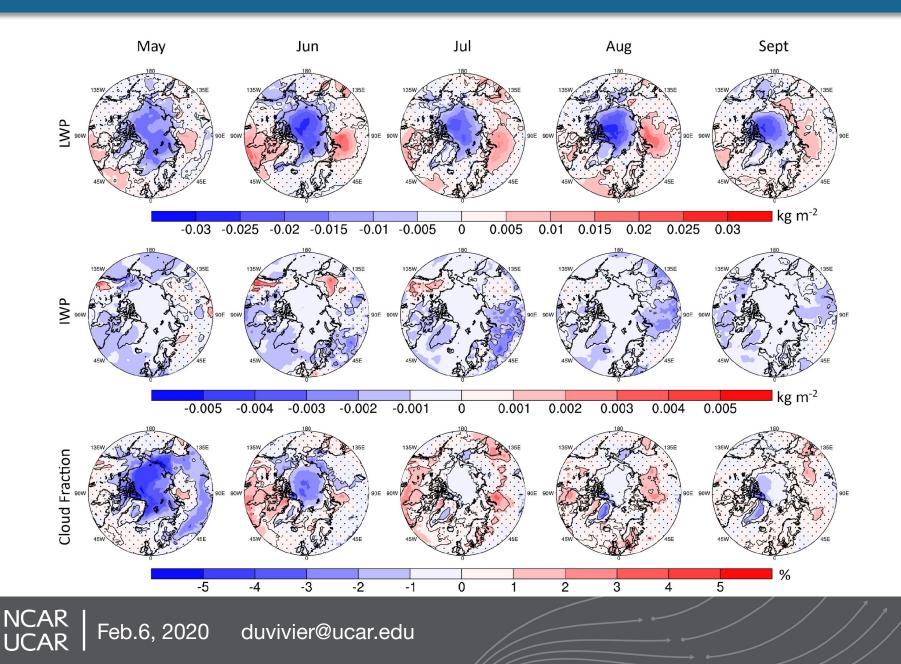

Feb.6, 2020 duvivier@ucar.edu

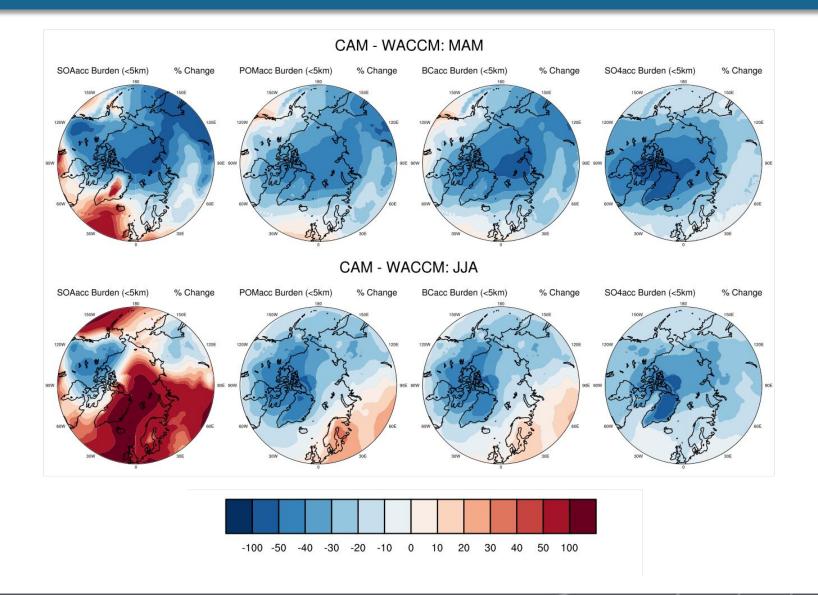

NCAR

UCAR

Cloud differences are largest over the sea ice

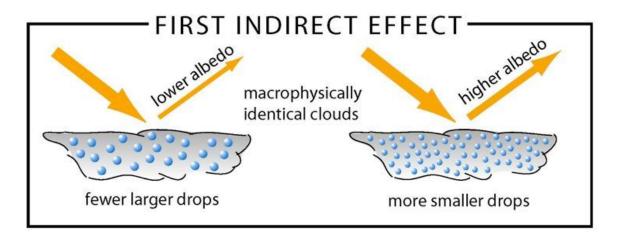

CAM has fewer aerosols

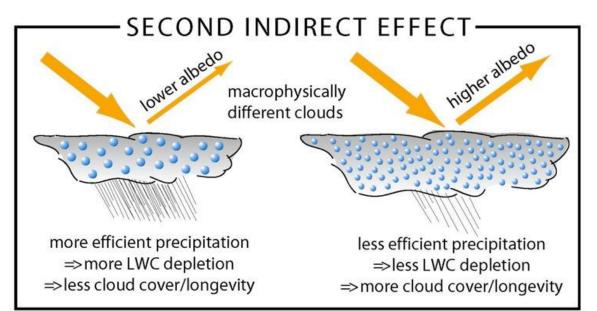

Feb.6, 2020 duvivier@ucar.edu

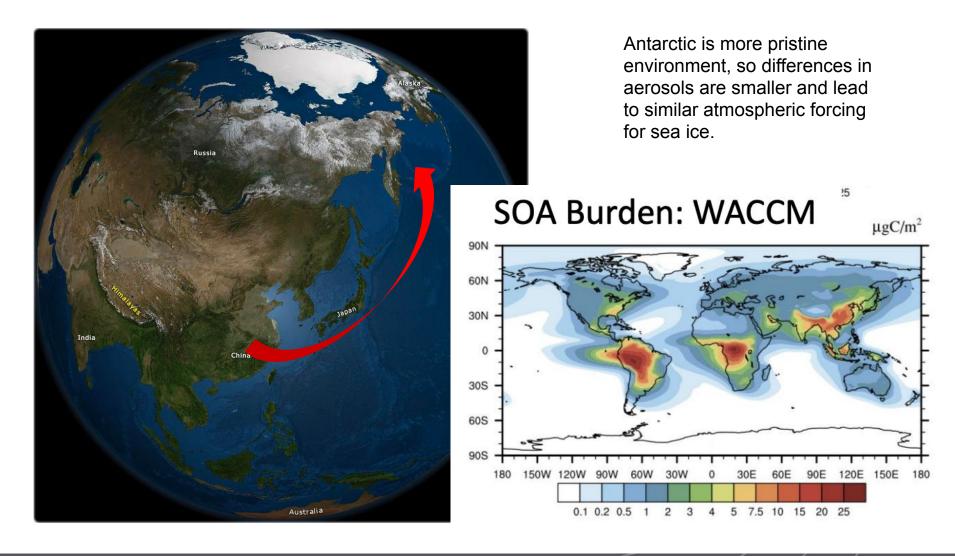

NCAR UCAR

More aerosol lead to more CCN and cloud particles, which affects clouds

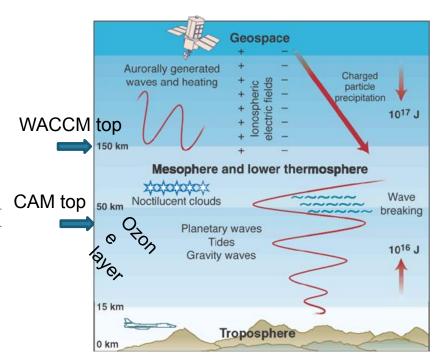

Aerosols are primarily produced outside the Arctic and transported there, where they are CCN

Some outstanding questions

- Subsequent tests with WACCM and SOA scheme turned off show similar results to CAM. □ Is there a way to run the low top model with important prognostic chemistry?
- What are the transport pathways and mechanisms for the aerosols?
- How realistic are the clouds? Are WACCM liquid cloud thicknesses reasonable?
- How realistic is this aerosol burden? Are there other aerosols (e.g. from biomass burning?) that might be missing or also important in Arctic clouds?
- Analysis is for Preindustrial □ how do aerosols, clouds, and the resulting sea ice mass and energy budgets differ in historical or future scenarios?

Conclusions

Thank you!

Questions?

The CESM project is supported primarily by the National Science Foundation (NSF). This material is based upon work supported by the National Center for Atmospheric Research, which is a major facility sponsored by the NSF under Cooperative Agreement No. 1852977. Computing and data storage resources, including the Cheyenne supercomputer (doi:10.5065/D6RX99HX), were provided by the Computational and Information Systems Laboratory (CISL) at NCAR.
