

# LWMG Updates

**THE 27<sup>th</sup> ANNUAL CESM WORKSHOP**

***Will Wieder & Rosie Fisher***

***LMWG Co-Chairs***

**13 JUNE 2022**

Pervasive alterations to snow-dominated ecosystem functions under climate change

Wieder et al. PNAS In press

- **Phase 0:** Infrastructure development (fast spinup, expose parameters, identify parameter ranges, ensemble and analysis scripting)
- **Phase 1:** One-at-a-time parameter ensembles under range of environmental perturbations (low/high CO<sub>2</sub>, PI and future climate, N-dep)
- **Phase 2:** Parameter interactions: Latin-hypercube ensemble → Neural network to emulate CLM output with parameters as input
- **Phase 3:** Optimize parameters for CESM3

# The CTSM Parameter Perturbation Experiment (PPE)

- **Phase 0:** Infrastructure development (fast spinup, expose parameters, identify parameter ranges, ensemble and analysis scripting)
- **Phase 1:** One-at-a-time parameter ensembles under range of environmental perturbations (low/high CO<sub>2</sub>, PI and future climate, N-dep)
- **Phase 2:** Parameter interactions: Latin-hypercube ensemble → Neural network to emulate CLM output with parameters as input
- **Phase 3:** Optimize parameters for CESM3

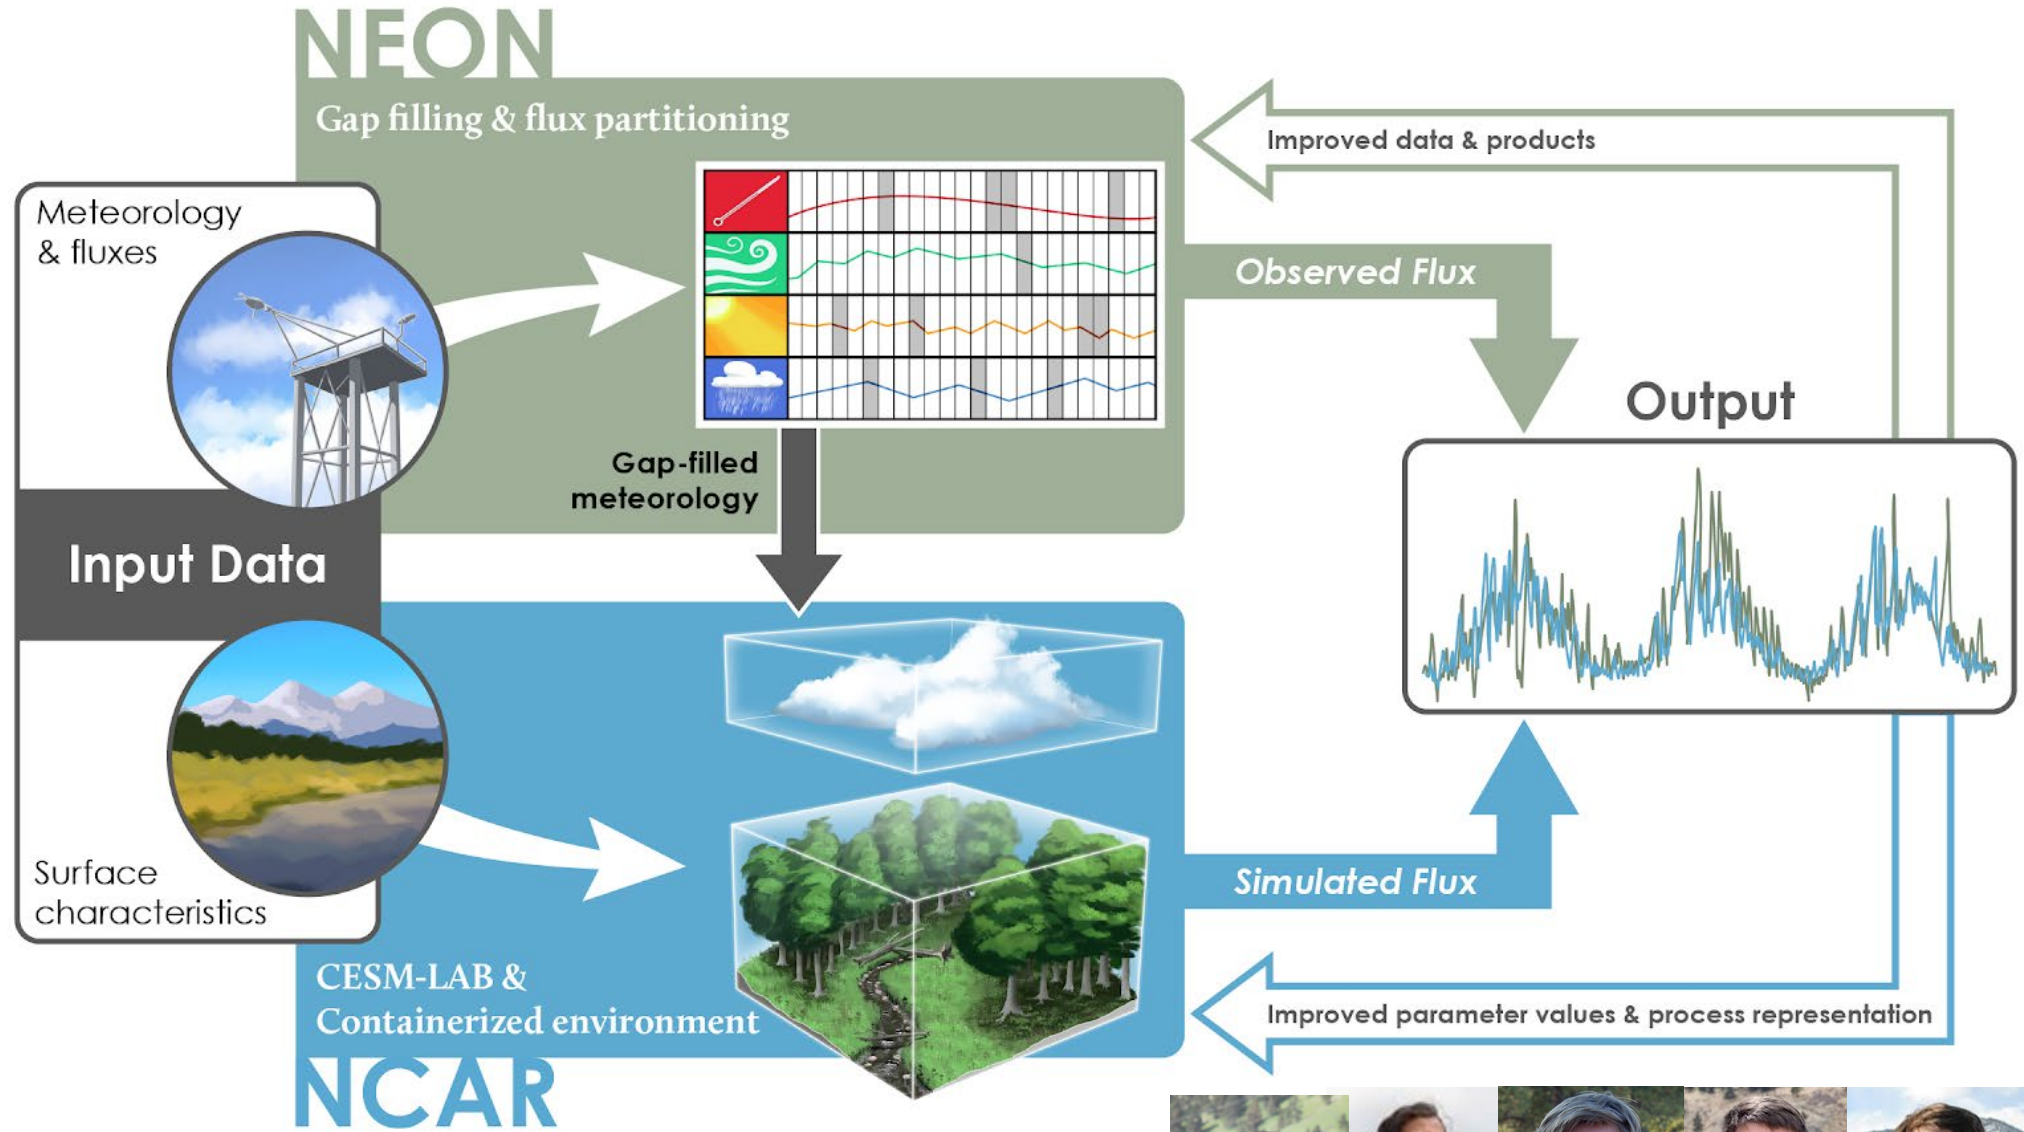

## CTSM PPE Spinoff Projects

- Land-atmosphere interactions (Univ Washington)
- NEON site calibration (Auburn Univ)
- ET recession timescales (Oregon State)
- Arctic river flow (RAL)
- Land influence on drought (CGD)
- Hydrologic sensitivity (Cornell Univ)
- Tropical carbon cycle interannual variability (JPL)
- GPP response to permafrost thaw (Northern Arizona Univ)
- CTSM-FATES calibration (CGD @ NEON sites)

## Infrastructure

CONSENSUS STUDY REPORT

NEXT GENERATION  
EARTH SYSTEMS SCIENCE  
AT THE  
NATIONAL SCIENCE FOUNDATION

# LMWG Infrastructure

“An example of a synergy among facilities is that identified by NCAR and NEON to *advance the capability of Earth system prediction to include terrestrial ecosystems and biological resources.*”

wwieder@ucar.edu

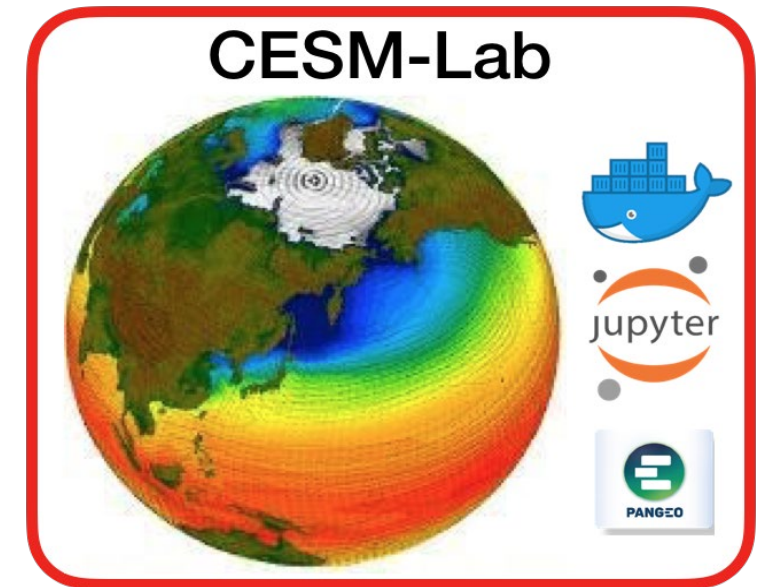

**The NCAR-NEON project opens opportunities for communities:**

- *Without access to advanced computing resources or with little modeling experience*
- *By extending the reach of NEON data products*

**CTSM tutorials** extend this effort, in May 2022 we hosted:

- 60 **virtual** participants in 2 day mini-tutorial who used
- **Cloud computing** with CESM-Lab to complete
- Practical exercises via **Jupyter notebooks**

Modular  
Extensible  
Repeatable  
System independent  
More frequent engagement  
Model for CESM?

## Welcome to the 2022 CTSM mini-tutorial

JupyterBook passing

license MIT Made with Jupyter Last commit june Contributors 5

The materials and notebooks in this tutorial is published as a Jupyter book [here](#).

This repository includes materials for the [Community Terrestrial Systems Model \(CTSM\)](#) Spring 2022 mini-tutorial ([link to agenda and resources](#)).

These tutorials are designed as an introduction to running the Community Terrestrial Systems Model (CTSM). We will go through three configurations that include running a:

1. Supported NEON tower site,
2. Global FATES simulation, and
3. Generic single point simulation.

### GETTING STARTED

Tutorial 0a: *CTSM, CESM-Lab, & Git*

Tutorial 0b: *CTSM Simulations at NEON Tower Sites*

### GLOBAL SIMULATION

Tutorial 1a: *Global Simulations*

Tutorial 1b: *Global Visualizations*

### GENERIC SINGLE POINT

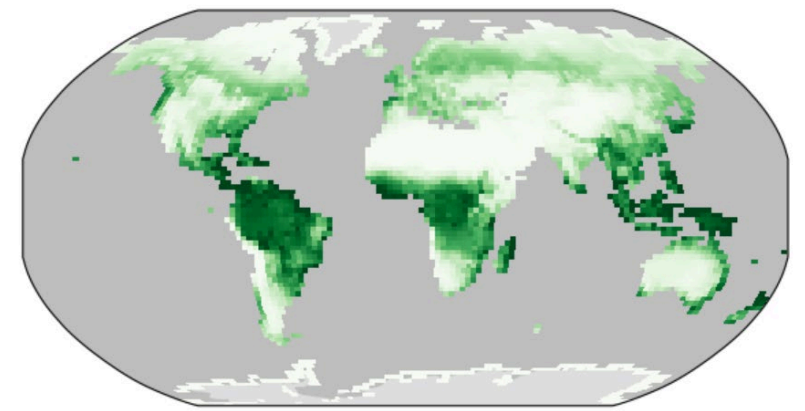

# Global

- Reduced Complexity modes
- Diagnostic testing (ILAMB)
- Land use harvest

FATES-SP mean GPP

# Regional

- FATES captures dynamic biogeography and biomass
- Fire feedbacks determine plant survival
- Critical for tropics simulation
- Testing in California (LBNL)

FATES AGB Mean

Saatchi Obs Mean

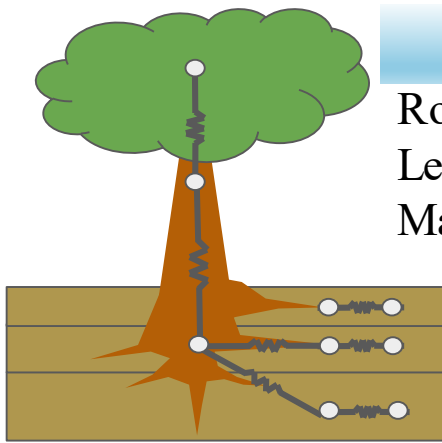

FATES Mean

GFED4.1s

## Plant Hydraulics

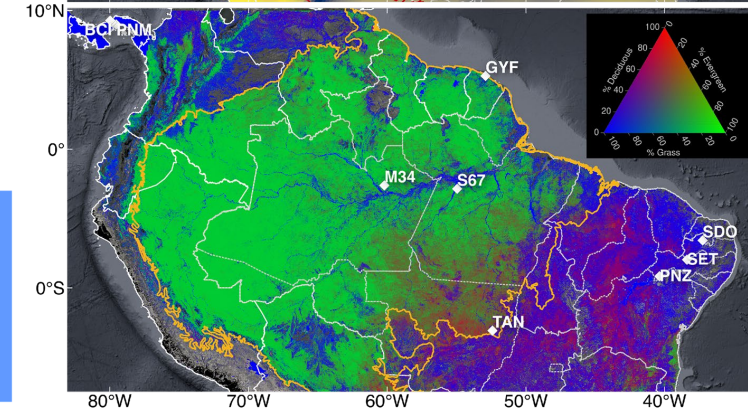

Root layers and plant-size root depth  
 Leaf humidity, stomata set transpiration  
 Mass balance at root nodes

## Fire

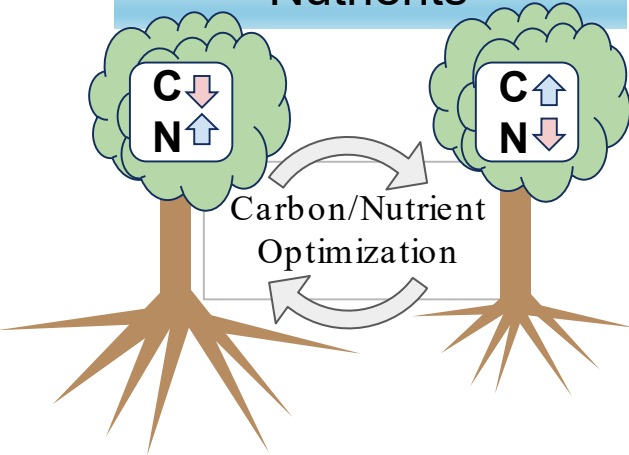

Live fuel moisture  
 Crown fire

## Deciduous Phenology Forest resilience to drought

Data from DeFries et al. (2000) *GCB*  
 Figure credit Marcos Longo, LBNL

## Nutrients

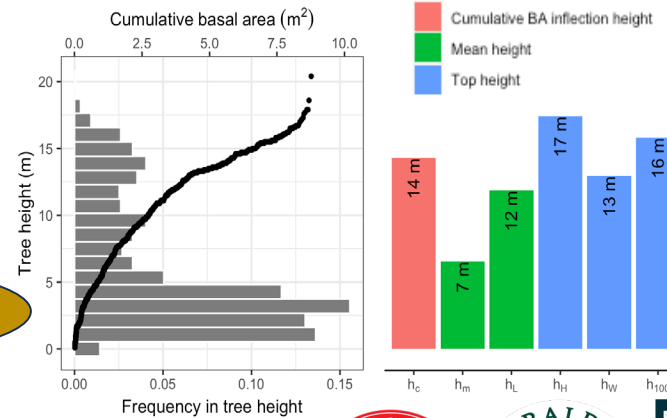

## User Interface

Tutorial in jupyter  
 User's guide  
 Technical document

## Canopy turbulence for mixed vegetation

## Moss

# LMWG Development Goals for CTSM6 & CESM3 [short]

## Atmospheric Fluxes

- [Dust emissions](#) [Longlei Li & Danny Leung]
- [BVOC emissions from MEGANv3.1](#) [Hui Wang]
- [Ozone deposition](#) [Danica Lombardozzi & others]
- [Lightning fluxes from CAM?](#) [Dave Lawrence]
- [Surface roughness](#) [Ronnie Meier, Keith Oleson]
- [Dynamic Urban, datasets](#), & parameterization [Keith Oleson]

## Hydrology

- [Representative Hillslope model](#) [Sean Swenson]
- [mizuRoute](#) [Naoki Mizukami & Erik Kluzek]

## Ecosystems & Biogeochemistry

- FATES fixed biogeography [Rosie Fisher, Charlie Koven, Jackie Shuman, Adrianna Foster & more]
- [MIMICS soil BGC model](#) [Will Wieder, Sam Levis]

## Crop Model

- [Shifting cultivation](#) [Peter Lawrence]
- [Crop planting dates](#) [Sam Rabin]
- APSIM crop phenology [Bin Peng & Bill Sacks]

## Features

- Perturbed Parameter Experiment [Daniel Kennedy, Dave Lawrence, & Katie Dagon]
- [Simple Land Model](#), SLIM [Marysa Lague, Erik K.]
- Updated surface dataset [Many contributors]
- CLASP [Meg Fowler]?
- Simplified enthalpy fluxes [Dave, Keith, Sean]?

## Notes

- Projects are relatively independent
- Some features may be available for particular compsets.
